

ISTRUZIONI PER IL PROGETTO, L'ESECUZIONE ED IL CONTROLLO DELLE STRUTTURE PREFABBRICATE IN CALCESTRUZZO.

PREMESSA

Le presenti Istruzioni sono state predisposte dal Gruppo di studio "Prefabbricazione" della Commissione di studio CNR per le norme relative alle costruzioni in cemento armato e cemento armato precompresso ai leganti idraulici ed ai laterizi; la stessa Commissione le ha esaminate e definitivamente approvate nella seduta del 10 dicembre 1998.

La precedente edizione "Istruzioni per il progetto, l'esecuzione e il controllo delle strutture prefabbricate in conglomerato cementizio e per le strutture costruite con sistemi industrializzati" (CNR 10025/84) è stata pubblicata sul Bollettino Ufficiale del CNR, pt. IV, n° 107, 1985.

La presente edizione viene licenziata a seguito dell'emanazione delle Norme Tecniche per la progettazione, esecuzione e collaudo delle costruzioni prefabbricate (DM 3 dicembre 1987), nonché del DM 9 gennaio 98, "Norme tecniche per il collaudo, l'esecuzione ed il controllo delle strutture in cemento armato, normale e precompresso e per le strutture metalliche", della possibilità di utilizzare l'Eurocodice 2 (con le integrazioni del Documento di Applicazione Nazionale contenuto nel citato DM) e della più recente normativa internazionale sull'argomento della prefabbricazione.

Esse forniscono pertanto una sintesi dello stato dell'arte in campo tecnico ed applicativo destinata a costituire, per le costruzioni prefabbricate, sia un contributo per ulteriori sviluppi della normativa ufficiale, sia un affiancamento all'applicazione delle norme in vigore. Resta comunque inteso che nella progettazione, esecuzione e controllo delle strutture prefabbricate permane l'obbligo del rispetto della normativa vigente.

Advances in Seismic Performance and Risk Estimation of Precast Concrete Buildings Andrea Belleri, Bruno Dal Lago, Hugo Rodrigues, 2022-02-09 **Materiali Strutturali Tradizionali e Innovativi: dalla Teoria alla Pratica (Terza Edizione)** Gerardo Carpentieri, 2022-01-07 Il testo una guida per il tecnico che deve eseguire qualunque attività che comprenda l'utilizzo di materiali idonei ai fini strutturali. Sono illustrati i metodi per la determinazione delle proprietà meccaniche dei materiali per le necessarie verifiche strutturali, le prove di qualificazione e accettazione. Dopo due capitoli introduttivi riguardanti la storia e la teoria dei materiali, sono trattati sia i più comuni materiali strutturali: calcestruzzo armato normale e precompresso, muratura, acciaio, legno, sia quelli più moderni disponibili: alluminio, vetro strutturale, FRCM o malte fibrorinforzate FRP o polimeri fibrorinforzati FRC o calcestruzzi fibrorinforzati, calcestruzzi alleggeriti ad alte prestazioni, appoggi strutturali e dispositivi antisismici. Sono discussi i collegamenti in acciaio, saldature, bullonature, chiodature, perni, legno, chiodi, viti, bulloni, spinotti, piastre punzonate, etc. e misti fissaggi su calcestruzzo secondo la nuova UNI EN 1992-4:2018 o su muratura. Vengono anche trattati i dispositivi elastomerici o a comportamento viscoso per la realizzazione dell'isolamento sismico e gli appoggi strutturali. Un intero capitolo dedicato ad esempi di Relazione sui Materiali Strutturali svolte ai sensi delle vigenti norme tecniche da presentare agli uffici competenti a corredo degli elaborati progettuali. Vengono proposti esempi svolti di relazioni sui materiali di edifici nuovi ed esistenti in c.a.c.a.p. acciaio e muratura. Le informazioni contenute nel documento sono aggiornate alle norme tecniche italiane DM 17/01/2018 Aggiornamento delle Norme Tecniche per le Costruzioni e relativa Circolare applicativa del CSLP 21/01/2019 n. 7. La trattazione è anche aggiornata ai vigenti eurocodici strutturali CEN. L'obiettivo è quello della sintesi per la rapida individuazione delle proprietà dei materiali, nonché quello della autoreferenzialità dei concetti di base, idonei a comprendere il significato delle quantità meccaniche e dei termini utilizzati. Stato quindi limitato il più possibile il ricorso a riferimenti, preferendo riportare le informazioni direttamente a corredo dei concetti a mano a mano esposti ed evitando così al lettore odiosi salti di pagina. Lo scopo è fornire al tecnico Progettista, Direttore dei Lavori, Direttore di Stabilimento un riferimento per il reperimento delle caratteristiche dei più diffusi materiali, delle prestazioni qualitative e dei controlli per l'accettazione delle forniture in cantiere. Le principali caratteristiche meccaniche dei materiali sono sintetizzate in tabelle numeriche, abachi e figure diffuse nel testo di facile ed immediata consultazione. Indice breve. Introduzione.
