Coal Mining Jobs Qld Australia:

Politics and Resistance of Coal in Australia and India Ruchira Talukdar, 2025-01-31 Since 2009 international climate activism has focused on stopping coalmining in solidarity with local and Indigenous struggles that are resisting coalmining. Based on ethnographic and historic research in Australia and India this book compares the politics and resistance to coal in the two countries particularly focusing on the time period between 2009 and 2018 and the case of the Carmichael coalmine in Queensland and the Mahan coalmine in central India. This book shows differences and similarities in the political economy of coal and creates understanding about the significantly different imperatives and narratives of anti coal environmentalism in Australia and India. Through the Stop Adani movement and its collaboration with the Wangan and Jagalingou Traditional Owners and farmers against coalmining in Queensland and Greenpeace and forest based communities resisting coalmining in Madhya Pradesh Ruchira Talukdar not only explores anti coal movement dynamics but also how these movements grapple with the violation of Indigenous land rights through coal extraction in both places. Drawing on differences and patterns in Australian and Indian anti coal activism this book proposes a global outlook an intersectional framework beyond the singularity of stopping coal that can encapsulate visions for secure futures of communities on the frontlines of fossil fuel struggles for climate activism. The conclusions help to decolonize climate activism as well as make it cognizant of global North South contextual differences for effective solidarity. The author's unique vantage point through experience in environmental activism over 20 years across Australia and India combined with research in both countries makes this book a crucial resource for scholars and practitioners in just transition climate politics and environmental activism across the global North and South.

Econobabble Richard Denniss, 2021-05-04 Economics is like a tyre lever it can be used to solve a problem or to beat someone over the head. What is econobabble? We hear it every day when politicians and commentators use incomprehensible economic jargon to dress up their self interest as the national interest to make the absurd seem inevitable or the inequitable seem fair. This book exposes the stupid arguments bizarre contradictions and complete lack of evidence upon which much common sense about the economy rests in Australia. Econobabble is for those who deep down have never believed that it makes sense economic or otherwise to help poor people by slashing public spending on the services they need. It's for those who have a sneaking suspicion that it would be cheaper to avoid the effects of climate change than to let them happen and then adapt. And it's for those who think pitting public health and aged care against the economy is a false dilemma one that's short sighted callous and potentially dangerous. In this new edition Richard Denniss demolishes the tired and misleading arguments of right wing economic experts with humour and precision empowering you to cut through the babble and reach the truth. The best guide you'll find to the literal non sense that usually passes for economic debate in this country. Ross Gittins.

Steckel, 2022-02-01 This volume provides an overview of the political economy of coal in diverse country contexts. Coal is the largest source of greenhouse gas emissions globally accounting for about 40 percent of energy related CO2 emissions. Continued construction of coal fired power plants could make the climate targets of the Paris Agreement infeasible to achieve. In spite of sharply declining costs for renewable energy sources many countries still heavily rely on coal to meet their energy demand. The predominance of coal can only be adequately understood in light of the political factors that determine energy policy formulation. To this end this edited volume assembles a wide variety of case studies exploring the political economy of coal for across the globe. These includes industrial and developing nations coal importers and exporters as well as countries that are either substantial coal users are just beginning to ramp up their capacities or have already initiated a coal phase out. Importantly all case studies are structured along a unifying framework that focuses on the central actors driving energy policy formulation their main objectives as well as the context that determines to what extent they can influence policy making. This large set of comparable studies will permit drawing conclusions regarding key similarities as well as differences driving coal use in different countries. This book will be of great interest to students and scholars of energy climate change resource management and sustainable development. It will also appeal to practitioners and policymakers involved in sustainable development.
