

## General Information

The Electronic Control Module (ECM) is a computer that controls engine operation. It receives information from the throttle position sensor, engine speed sensor, engine coolant temperature sensor, and other sensors. The ECM then sends signals to the fuel injectors, ignition system, and other components to control engine operation.

The ECM also controls the transmission shift solenoid. It receives information from the throttle position sensor, engine speed sensor, and transmission input speed sensor. The ECM then sends signals to the shift solenoid to control the transmission shift.

Computer Controlled System (CCS) includes the ECM and the following sensors:

- THROTTLE POSITION SENSOR
- ENGINE SPEED SENSOR
- TRANSMISSION INPUT SPEED SENSOR
- ENGINE COOLANT TEMPERATURE SENSOR
- EXHAUST OXYGEN SENSOR

## System Components

There are two primary modes of operation for the CCS:

- Open Loop
- Closed Loop

## Open Loop Mode of Operation

In general terms, each engine will have a different operating range. The ECM will monitor the engine speed and throttle position. When the engine speed is low and the throttle position is high, the ECM will enter open loop mode. In this mode, the ECM will control the fuel injectors and ignition system based on pre-programmed values.

## G.M. LOCK-UP TORQUE CONVERTERS 4

Lock-Up Torque Converter (LTC) (Part No. 10555555)

The LTC is a device that locks the torque converter to the transmission. It is controlled by the ECM. When the LTC is locked, the engine speed and transmission input speed are the same. This allows the engine to drive the transmission directly, which improves fuel economy and reduces engine wear.

During open loop operation, the engine speed is low and the throttle position is high. The ECM will control the fuel injectors and ignition system based on pre-programmed values. When the engine speed is high and the throttle position is low, the ECM will enter closed loop mode. In this mode, the ECM will control the fuel injectors and ignition system based on real-time feedback from the engine sensors.

**NOTE:** The ECM is not a repairable item. If the ECM is damaged, it must be replaced. The ECM is a computerized device and should be handled with care.

## Technician Signal to Computer

The technician can send a signal to the ECM using a scan tool. The scan tool is connected to the ECM's diagnostic port. The technician can then send a signal to the ECM to perform a specific function, such as clearing the ECM's memory or performing a self-test.

The technician can also send a signal to the ECM using a jumper wire. The jumper wire is connected to the ECM's diagnostic port. The technician can then send a signal to the ECM by touching the jumper wire to the diagnostic port.

A technician can also send a signal to the ECM using a scan tool. The scan tool is connected to the ECM's diagnostic port. The technician can then send a signal to the ECM to perform a specific function, such as clearing the ECM's memory or performing a self-test.

## ENGINE COOLANT SENSOR

The engine coolant sensor (ECS) is a device that monitors the engine coolant temperature. It is connected to the ECM. The ECM uses the ECS signal to control the engine's operation. For example, the ECM will increase the engine's idle speed when the coolant temperature is low to prevent the engine from stalling.

The ECS is a device that monitors the engine coolant temperature. It is connected to the ECM. The ECM uses the ECS signal to control the engine's operation. For example, the ECM will increase the engine's idle speed when the coolant temperature is low to prevent the engine from stalling.

**NOTE:** The ground wire for the ECS is connected to the engine block. The ground wire for the ECM is connected to the battery's negative terminal.

## EXHAUST OXYGEN SENSOR

The exhaust oxygen sensor (EOS) is a device that monitors the oxygen content of the exhaust gas. It is connected to the ECM. The ECM uses the EOS signal to control the engine's operation. For example, the ECM will adjust the fuel mixture based on the EOS signal to maintain the optimal air-fuel ratio.
