Hormones and Reproduction of Vertebrates, Volume 1 David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals. It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events. Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively, the volumes are prepared so as to provide a thorough topical treatment across the vertebrates. Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided. A complete essential and up-to-date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research. Covers the endocrinology, neuroendocrinology, physiology, behaviour and anatomy of vertebrate reproduction. Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all. Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects, similarities and differences between them.

Marine Nature Conservation Review Keith Hiscock, Joint Nature Conservation Committee (Great Britain), 1996 The Marine Nature Conservation Review of Great Britain (MNCR) commenced in 1987 with the main objectives of extending our knowledge of benthic marine habitats, communities and species and identifying sites and species of nature conservation importance. This book presents a summary of the rationale and methods used in the MNCR. **Jacaranda Science Quest 7 for the Victorian Curriculum, LearnON and Print** Graeme Lofts, Merrin J. Malashichev,A. Wallace Deckel,2006-08-08 This volume grew out of the 2nd International Symposium on Behavioral and Morphological Asymmetries which took place in St Petersburg Russia in September 2004 at the St Petersburg State University under the patronage of the St Petersburg Society of Naturalists The Symposium is the descendant of a satellite event with a similar name of the 4th World Congress of Herpetology December 2001 Bentota Sri Lanka While the 1st Symposium see special issue number 3 for 2002 of the journal *Laterality* covered only asymmetries observed in amphibians and reptiles the second one had a broader scope Three years passed since the Sri Lanka meeting and there was sustained and increasing interest in vertebrate lateralization in the scientific community especially in lower vertebrates or at least in nonmammalian models This supported not only by the collection of talks at the Symposium but also by current publications in international periodicals Talks here were substantially biased towards the lower vertebrates and birds while reptiles remained to be studied in more detail Two important rationales were considered for the Symposium and the volume which you have in hand The first was to

bring together topics and specialists representing different branches of the relatively broad field of research of animal asymmetries. The contributions focused on three main subjects: 1. development of structural and functional asymmetries, 2. evolution and adaptation, and 3. function. Aiming for a broader range of topics, the Symposium may still show the current perspective. The increasing number of contributors, twice as many as at the Sri Lanka meeting, give at least a hope that it was indeed so. We however further invited authors who although not present at the meeting itself nevertheless could contribute to the book to finalize its shape. The other purpose of this volume is to expose Western scientists to Eastern thoughts regarding laterality and vice versa. We aimed also to help Russian scientists with limited resources and access to the international journals the chance to publish in the Western literature. It seemed to us that this is a fine and perfectly acceptable approach which on the other hand explains some of the unevenness in the quality and the style of the different manuscripts. Taken together, these fourteen Chapters we believe display a variety of the most interesting and intriguing topics within the broad field of animal lateralization, showing the perspectives of its developments. Far from complete, the volume nevertheless is a state of the art book which complements a bulk of recent literature on genetics and developmental studies of asymmetries of the heart and other inner organs, interhemispheric specialization in human subjects, and fluctuating morphological asymmetry in animals.
