America's Addiction to Automobiles Chad Frederick, 2017-09-21 A provocative look at our nation's dependency on the automobile and how its potential impact on urban design will either make or break our health economy and quality of life. In this thought-provoking work, author and urban planning expert Chad Frederick scrutinizes the use of automobiles in cities, investigating its role in exacerbating urban inequalities and thwarting sustainability of modern society. Through a comprehensive, thoughtful discussion, Frederick illustrates how the automobile is fundamentally at odds with the very nature of cities. He shows how cars impose huge burdens on our health, equity, environment, local and national economy, and quality of life. Most of all, he shows how automobile dependency has put our entire society at risk. The book delves into the monumental role of automobiles in the development of cities after the Great Depression, impacting the American identity and affecting the way we produce and manage urban spaces. Frederick provides compelling evidence that cities with more diverse modes of transportation are greener, healthier, more prosperous, and even more enjoyable places to live than automobile-dependent cities. He identifies one institution responsible for our inability to improve our cities: the social sciences, and examines the root cause of our inability to make progress toward more multi-modal cities. In conclusion, the author offers a radical solution for moving beyond the underlying logic that forces us to create automobile-dependent cities. **The**

Heat Stress and Mitigation Solutions Vincenzo Costanzo, Gianpiero Evola, Luigi Marletta, 2021-09-08 This book provides the reader with an understanding of the impact that different morphologies, construction materials, and green coverage solutions have on the urban microclimate, thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas. The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate. Despite its relevance, only limited literature is currently devoted to appraising, from an engineering perspective, the intertwining relationships between urban geometry and fabrics, energy fluxes between buildings and their surroundings, outdoor microclimate conditions, and building energy demands in urban areas. This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale while emphasizing the role played by different spatial arrangements, manmade materials, and green infrastructures on the outdoor microclimate. The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians and on the buildings' energy demand for space heating and cooling. Then, based upon cutting-edge experimental activities and simulation work, this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment, such as cool materials, thermochromic and retroreflective finishing materials, and green infrastructures applied either at a building scale or at the urban scale. The effect

of these solutions is demonstrated for different cities worldwide under a range of climate conditions Finally the book opens a wider perspective by introducing the basic elements that allow fuel poverty raw materials consumption and the principles of circular economy in the definition of a resilient urban settlement The Well-Tempered City Jonathan F.
