**Canadian Foundation Engineering Manual** Canadian Geotechnical Society, 1978      Canadian Foundation Engineering Manual, 1978      **LRFD Design and Construction of Shallow Foundations for Highway Bridge Structures**, 2010 This report develops and calibrates procedures and modifies the AASHTO LRFD Bridge Design Specifications Section 10 Foundations for the Strength Limit State Design of Shallow Foundations The material in this report will be of immediate interest to bridge engineers and geotechnical engineers involved in the design of shallow foundations

**Canadian Foundation Engineering Manual** Canadian Geotechnical Society, 1978      **Basics of Foundation Design** Bengt Fellenius, 2017-03-17 The Red Book presents a background to conventional foundation analysis and design The text is not intended to replace the much more comprehensive standard textbooks but rather to support and augment these in a few important areas supplying methods applicable to practical cases handled daily by practising engineers and providing the basic soil mechanics background to those methods It concentrates on the static design for stationary foundation conditions Although the topic is far from exhaustively treated it does intend to present most of the basic material needed for a practising engineer involved in routine geotechnical design as well as provide the tools for an engineering student to approach and solve common geotechnical design problems      *Canadian Foundation Engineering Manual* Canadian Geotechnical Society. Foundations Committee, 1978      Canadian Foundation Engineering Manual Canadian Geotechnical Society. Foundations Committee, 1985      **Model Uncertainties in Foundation Design** Chong Tang, Kok-Kwang Phoon, 2021-03-16 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997 1 202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal      *Analysis, Design and Construction of Foundations* Yung Ming Cheng, Chi Wai Law, Leilei Liu, 2024-05-28 Analysis Design and Construction of Foundations covers the key concepts in the analysis and design of foundation systems balancing theory with engineering practice The book examines in depth the methods used for the analysis design and construction of shallow foundations deep foundations excavation and lateral

support systems slope stability and stabilization and ground monitoring for proper site management Some new and innovative foundation construction methods are also introduced It is illustrated with case studies of failures and defects from actual construction projects This second edition is extensively revised and developed to include a new chapter on numerical methods in geotechnical engineering as well as a large number of new construction drawings project photos and construction method statements from existing projects to give the book a stronger professional application and connection to engineering practice It also covers some new advanced theoretical concepts not covered in other texts making it useful in both the theoretical and practical aspects It is ideal for senior undergraduates and graduate students academics and consulting geotechnical engineers

**Modern Geotechnical Design Codes of Practice** Patrick Arnold, Gordon A. Fenton, Michael A. Hicks, Timo Schweckendiek, Brian Simpson, 2013 The ground is one of the most highly variable of engineering materials It is therefore not surprising that geotechnical designs depend on local site conditions and local engineering experience Engineering practices relating to investigation and design methods site understanding and to safety levels acceptable to society will therefore vary between different regions The challenge in geotechnical engineering is to make use of worldwide geotechnical experience established over many years to aid in the development and harmonization of geotechnical design codes Given the significant uncertainties involved empiricism and engineering judgment will undoubtedly always be an essential element of geotechnical design However rigorous and scientific approaches based on probability theory are finding increased attention in the calibration of modern geotechnical codes of practice and these codes can and should be used to aid fundamental engineering judgment Containing contributions on Code Implementation Code Application and Code Development this book provides a single resource that code developers practitioners and researchers can use to understand the different choices made by national code developers around the world Furthermore the book highlights some of the key challenges faced worldwide concerning the ongoing process of harmonizing geotechnical design code specifications
