sanders grinders shapers and lathes tips on adjusting your tools and making ingenious jigs   <u>Electronic String Art</u> Stephen Erfle,2024-02-20 String art is a well known and popular activity that uses string a board and nails to produce artistic images although there are variations that use different modalities This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds The downside of this highly tactile activity is that it is quite time consuming and rigid By contrast electronic string art offers much more flexibility to set up or change nail locations and counting rules and the images created from those changes change instantaneously Electronic String Art Rhythmic Mathematics invites readers to use the author s digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise accessible explanations of the underlying mathematical principles regarding how the images were created and how they change Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry number theory and modular arithmetic from approximately 200 short interdependent sections Features Readers are able to drill down on images in order to understand why they work using short 1 to 2 page stand alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open ended inherently flexible teaching resource for elementary middle and high school level mathematics The most mathematically challenging sections or portions of a section are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises solutions and many online digital resources These QR codes take you to these digital resources One takes you directly to the web version of the string art model used as a starting point for teaching the parameters of the model in Section 25 5 The other takes you to the ESA web page with additional links to a variety of resources   *C++ and Object-oriented Programming* Kip R. Irvine,1997 An accessible introduction to the C language and object oriented design for students and programmers who know at least one modern high level language Understanding that the greatest challenge in learning C is being able to think in terms of classes and objects Kip Irvine introduces these topics immediately as concepts in the context of real world applications such as e mail systems and automated bank tellers Through extensive use of short program examples and case studies the author provides a concise clear discussion of C syntax He includes extensive coverage of the object model concept and how to use an object oriented approach to design Throughout the book the importance of careful analysis and design of programs is evidenced BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Helmuth Trischler,Stefan Zeilinger,2003 In this book historians from museums and academia examine transport artefacts and the systems of mobility in which they are embedded Large artefacts such as the Stephensons Rocket locomotive a Lockheed F 104 Starfighter a Ford Model T are impressive manifestations of engineering ingenuity They help museum visitors understand the design and use of the technologies that move people and goods But they are also historical icons so different audiences be they professional historians of technology or casual visitors will interpret them in different ways In a transport exhibition individual artefacts can dominate a visitor s attention overwhelming the themes expressed by other material The power of such an artefact helps to attract interest but at the same time endangers its incorporation into a larger system Curators have to find ways to demonstrate the systemic nature of transport by integrating these objects with others the smaller component artefacts such as electrochemical batteries pneumatic tyres and dashboards and the social artefacts such as drivers consumers rules and institutions The authors consider a variety of transport artefacts from pioneering steam locomotives and early automobile interiors to jet engines and the automatically guided cars of the future Those with curatorial responsibilities also reflect on how theoretical notions about transport can be expressed in the practical context of a museum and how a reappraisal of visitors responses to transport artefacts is leading to new ways of showcasing the history of mobility   Arizona '96 Fodor's,Fodors Mckay,Fodor's Travel Publications, Inc.
