

# Phylogenetic Trees

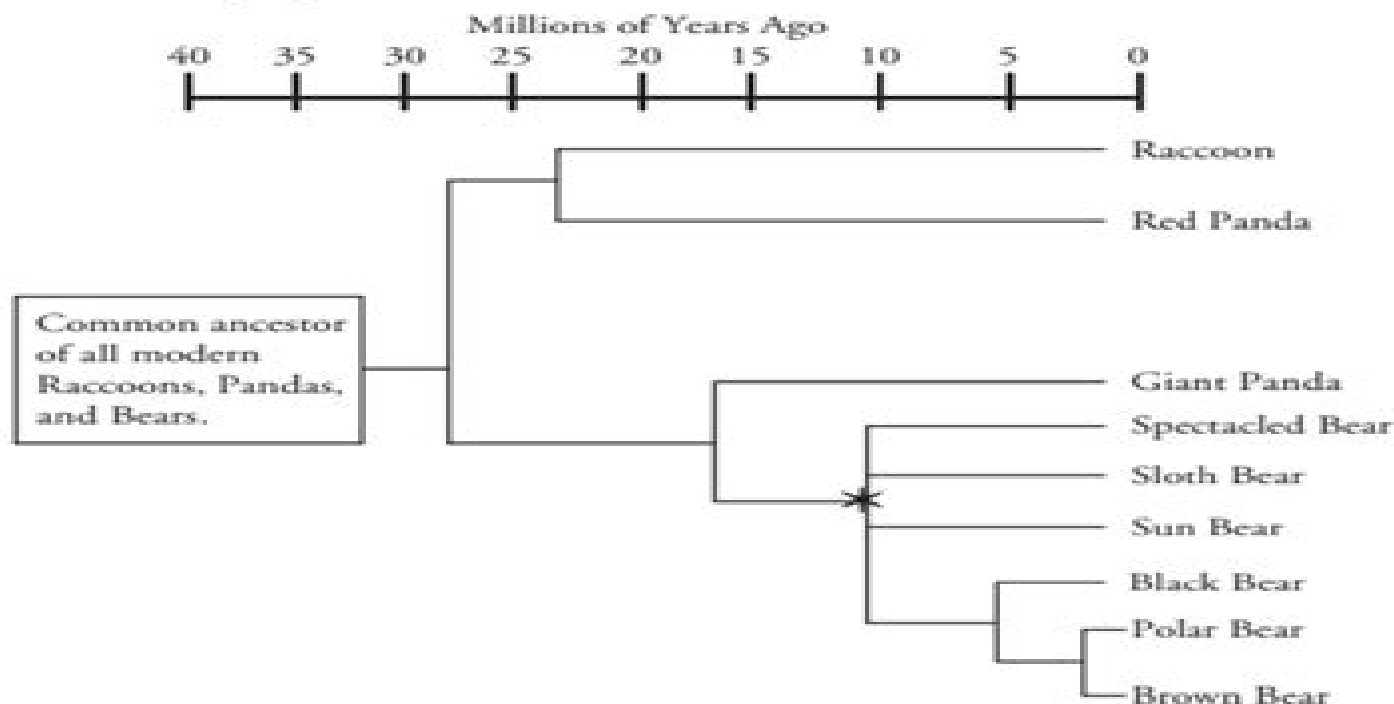

How do the changes in gene sequences allow us to reconstruct the evolutionary relationships between related species?

Directions: Remember to answer the following questions using a *different color font*.

## Why?

The saying "Don't judge a book by its cover." could be applied to the topic of evolution. For example, humans share 75% of their DNA with chickens. Biologists point to this as evidence that humans and chickens once shared a common ancestor. The advent of DNA technology has given scientists the tools with which to examine how closely related certain species are. DNA analysis allows scientists to construct phylogenetic trees whose branches link together the relatedness of different organisms.

## Model 1 - Phylogenetic Trees

1. Refer to Model 1.

a. How long ago did the common ancestor of all the organisms on this phylogenetic tree exist?

40 million years ago
