

Biology II Exam II Study Guide

- Major plant groups
 - Multicellular algae: aquatic, nonvascular, seedless
 - Red algae, green algae
 - Not all algae are plants (ex: brown algae, single-celled algae)
 - Bryophytes: terrestrial, nonvascular, seedless
 - Mosses, liverworts, hornworts
 - Pteridophytes: terrestrial, vascular, seedless
 - Ferns, horsetails, club mosses, ground pines, quillworts
 - Higher plants: mainly terrestrial, vascular, produce seeds
 - Gymnosperms: "naked seeds"
 - Conifers, cycads, Ginkgo, gnetophytes
 - Angiosperms: "covered" seeds; the flowering plants
 - All the plants that produce flowers (most of the plants seen around today)
 - Two major groups
 - Monocots: grasses, palms
 - Dicots (eudicots): most of flowering plants
 - Some much smaller "oddball" groups as well, such as the magnolias
- Transport
 - Passive transport (aka diffusion)
 - Diffusion: dispersal of molecules randomly
 - Random movement (kinetics) causes random distribution
 - Random movement of diffusion results in a net directional movement from areas of high concentration to low concentration, until the molecules are randomly distributed throughout
 - Some compounds pass right through a cell's plasma membrane, because they are chemically able to slip through the phospholipid bilayer
 - Nonpolar molecules, and small uncharged polar molecules
 - Osmosis: the diffusion of water with net movement from areas of high concentration to areas of low concentration
 - Higher solute concentration = lower water concentration
 - Can move across membrane reasonably well
 - Aquaporins: water channels through cell membrane
 - Tonicity: the solute concentration of a solution relative to that of the cell
