

Introduction

The JRL MONITOR Antenna Tuner is a sub-compact 300 watt capability antenna tuner of modern design. Its features offer the Amateur, SWL, or CBer the ultimate in operating flexibility. Virtually any type of antenna system can be used, whether it be COAX (50 or 75 ohm), balanced line (twin-lead), or random wire. The JRL MONITOR not only matches any type of feedline to a nominal 50-ohm, but is small enough to go absolutely anywhere from mobile to fixed to portable use. A mobile mounting bracket is included, and the unit is equipped with rubber feet to protect other equipment when stacking the JRL MONITOR. Another unique feature built into the unit is an RF sampling circuit and companion relative power output meter, front panel mounted. Using the relative power output meter greatly aids tuning, especially when an SWR bridge/ power meter (such as the Dentron W-2) is unavailable. The frequency range of the JRL MONITOR tuner is 1.8 to 30 MHz, continuous. The JRL MONITOR was designed to be used with any modulator or transceiver producing up to 300 watts output. American-made components and all-metal construction of the unit combine for long life and trouble-free service.
