

ADJUSTING LOWER BLADE GUIDES

1. Release the tension from the lower wheels.
2. Loosen the two screws (A) (Fig. 27) and adjust the blade guides, one at a time, at about 45 degrees, as close as possible to the angle of the new blade being inserted, not to point the blade. Then tighten the two screws (A).
3. Loosen the two screws (B) (Fig. 27) and move the same plate until you have reached the correct vertical edge guide (B) to adjust the "upper" vertical blade plate. Then tighten the two screws (B).

TILTING THE TABLE

To set the table for angle cutting, loosen the wing bolt (Fig. 28) and tilt the table until the pointer (B) indicates the desired angle on the scale (A). Then tighten the wing bolt (B). The maximum tilt is 45 degrees to the left from a perpendicular position. After the table has been tilted, be certain that the blade is vertical when operating the table.

LEVELING THE TABLE

Support your work upon the work surface to at 90 degrees to the blade. To check and adjust, proceed as follows:

1. Loosen the table tilting lock handle (A) (Fig. 29) and tilt the table at the way to the back. Then tighten lock handle (A).
2. Place a square (B) (Fig. 29) on the table surface with one end of the square against the side of the table, as shown, and check to see if the table is 90 degrees to the blade.
3. Turn adjustment screws (C) (Fig. 29) until the square handle (A) (Fig. 29) and lock nut (D) adjust until the square is perfectly square. Tighten or loosen screws (C) and lock nut (D) until square is true. Then adjust the table to 90 degrees to the blade. Then tighten lock handle (A) and adjust handle to provide the same degree level on the back of the table.

CHANGING BLADES

1. Disconnect the machine from the power source.
2. Release blade tension, open wing bolt (A) (Fig. 30) with internal adjust blade guard (B). Release table when wing bolt, tension, and wing nut (C).
3. Disconnect lower saw blade (D) (Fig. 30).
4. Remove lower saw blade from wheels, insert new blade. Both on new blade are pointing down toward the blade guard (B) (Fig. 30) and then adjust tension and wing nut (C).

MITER GAGE

A miter gage (Fig. 31) is supplied with your machine. The miter gage has a sliding scale which can be adjusted to the angle of the blade. The miter gage can be used for squaring, beveling, and other work.
