Struts is the de facto standard for Java-based Web applications; in fact, some people consider it the yardstick by which all other Web application frameworks are measured. The Struts framework is based on a classic Model View Controller (MVC) design paradigm that combines Java servlets, Java Server Pages (JSP), custom tags, and message resources into a unified framework. **Jakarta Struts For Dummies** will get you up and running with Struts in a hurry so you can control the business logic of your applications. In Part I, **Jakarta Struts For Dummies** helps you understand and apply the Model View Controller (MVC) design pattern. Integrate Struts into a Web application environment. Use tag libraries to simplify your JSP pages. Maintain control with effective security features. Internationalize Web applications with a feature that creates easy-to-update text content so international viewers can see pages in their own languages. Represent all types of data, from one or two items to a huge and complex database. Extend Jakarta's functionality with plug-ins. Use logging to help you troubleshoot an application. Loaded with tips, examples, and explanatory sidebars, this plain English guide to Jakarta Struts will have you creating Web applications with Struts before you can say Java.
