(1) _____ refers to the (2) _____ of life in an area. Another word for biological diversity is biodiversity. The simplest measure of biodiversity is the number of (3) _____ that live in a certain area. The more species there are, the (4) _____ is the biodiversity of the area. Biodiversity on land tends to (5) _____ as you move toward the (6) _____. Biodiversity is greater on large islands than on small islands because large islands have more (7) _____ and a greater variety of (8) _____.

In your notebook, read about the importance of biodiversity.

For each statement below, write *true* or *false*.

- _____ 9. Biodiversity provides our world with beauty.
- _____ 10. The loss of a species from an ecosystem usually has no effect because of the presence of other species in the ecosystem.
- _____ 11. Biodiversity decreases the stability of ecosystems because more species are competing with each other.
- _____ 12. Increasing the biodiversity of an ecosystem may result in more riches.
- _____ 13. Diseases are more likely to spread in an ecosystem with high biodiversity than in an ecosystem with low biodiversity.
- _____ 14. A decrease in Earth's biodiversity may affect people's diets.
- _____ 15. Preserving diverse plant species may lead to the discovery of new drugs in the future.

Conservation Biology Promila Kapoor-Vijay,1992-01-01 This publication is comprehensive in its scope covering both scientific and public policy aspects It is an invaluable aid to those engaged in imparting training in the conservation and sustainable management of biological diversity *An Introduction to Conservation Biology* Anna Sher,Richard B. Primack,2020 **Drafting a Conservation Blueprint** Craig Groves,2003-05-16 Drafting a Conservation Blueprint lays out for the first time in book form a step by step planning process for conserving the biological diversity of entire regions In an engaging and accessible style the author explains how to develop a regional conservation plan and offers experience based guidance that brings together relevant information from the fields of ecology conservation biology planning and policy Individual chapters outline and discuss the main steps of the planning process including an overview of the planning framework selecting conservation targets and setting goals assessing existing conservation areas and filling information gaps assessing population viability and ecological integrity selecting and designing a portfolio of conservation areas assessing

threats and setting priorities A concluding section offers advice on turning conservation plans into action along with specific examples from around the world The book brings together a wide range of information about conservation planning that is grounded in both a strong scientific foundation and in the realities of implementation *Fundamentals of Conservation Biology* Malcolm L. Hunter, Jr., James P. Gibbs, 2006-10-23 In the new edition of this highly successful book Malcolm Hunter and new co author James Gibbs offer a thorough introduction to the fascinating and important field of conservation biology focusing on what can be done to maintain biodiversity through management of ecosystems and populations Starting with a succinct look at conservation and biodiversity this book progresses to contend with some of the subject's most complex topics such as mass extinctions ecosystem degradation and over exploitation Discusses social political and economic aspects of conservation biology Thoroughly revised with over six hundred new references and web links to many of the organizations involved in conservation biology striking photographs and maps Artwork from the book is available to instructors online at www.blackwellpublishing.com/hunter and by request on CD ROM

Reading the Story in DNA Lindell Bromham, 2008 The world is full of DNA The salad in your sandwich the pollen in the air even the dirt on your shoes contains DNA from which a vast amount of information can be gained including the identification of individuals and species the structure and distribution of populations the origins of lineages and the pace and mechanisms of evolutionary change Reading the story in DNA is a beginner's guide to molecular evolution and is the perfect companion on the journey to a proper understanding of molecular data The central theme of the book is that in order to get ecological or evolutionary information out of molecular data you must understand the way that the molecular data evolves and the influence that the assumptions you make have on the answers you get The book blends beautifully clear explanations with cutting edge examples from the research literature drawing on the fields of biodiversity conservation biology epidemiology phylogeography evolutionary development and ancient DNA to explore topics such as molecular evolutionary theory phylogenetics molecular clocks detecting selection and recombination and identifying individuals from molecular data Technical detail is set apart from the main text allowing the student to approach the material in different ways read only the text and skip the finer details use the text to understand the technical details or vice versa or identify key case studies and read the concepts and methods particular to that case Features The first text to make the use of molecular data in whole organism biology truly accessible to students Engaging yet highly informative writing style captures the author's genuine and infectious passion for her subject Stunning full color presentation is the perfect complement to the author's written prose Blends clear straightforward explanations with cutting edge case studies there is no sacrifice of content for the sake of accessibility Avoids mathematical and statistical detail to focus on the conceptual basis of molecular analysis Unique combination of text technical information and case studies enables flexible use in whatever way works for the reader Online Resource Centre features additional resources for both lecturers and students For instructors the Online Resource Centre features figures from the book in electronic format ready

to download and tutorial exercises and practical projects For students the website offers annotated weblinks a flashcard glossary topical updates and links to relevant journal articles and websites that describe advancements in the field since the book s publication *The Biodiversity Collection* Barb Pitman,Judy Braus,Lani Asato,1998 This collection is designed to help educators find outstanding curricula multimedia resources and other educational materials that can enhance biodiversity teaching in a variety of settings The curriculum materials were reviewed by teams comprised of classroom teachers content experts and environmental educators The materials listed in this compendium received the highest ratings of those reviewed The six characteristics used to evaluate the curriculum materials include fairness and accuracy depth emphasis on skills building action orientation instructional soundness and usability There are two major parts to this collection The first part highlights 47 of the best supplementary curricula that focus on some aspect of biodiversity Each entry includes a summary of the curriculum and information about grade levels subject areas author publisher and price Each entry also includes comments specific to the six key characteristics and a few quotations from the reviewers evaluation sheets that help summarize the review The second part of the collection contains an annotated bibliography that features general background information children s books and magazines multimedia resources web sites and a variety of other resources focusing on biodiversity issues Topics covered include wildlife endangered species wetlands global warming and marine biology PVD

Conservation Biology for All Navjot S. Sodhi,Paul R. Ehrlich,2010-01-07 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conversion and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources **Key Questions in Wildlife & Nature Conservation Law** Paul A.

Rees,2024-06-25 Law plays an essential part in the conservation of wildlife and ecosystems The study of wildlife and nature conservation law is an important component of a wide range of programmes of study including wildlife conservation environmental management and environmental law This book has been produced in a convenient format so that it can be

used at any time in any place It allows the reader to learn and revise the meaning of terms used in wildlife and nature conservation law and study the role of legislation at national European Union EU and international level in the protection of individual species habitats and landscapes It uses examples from a wide variety of taxa habitats and protected areas selected from a range of jurisdictions from the United Kingdom the United States and Australia to Antarctica and the High Seas Topics include the control of hunting the conservation of trees and forests the protection of National Parks and wilderness areas wildlife trade and the organisations involved in the enforcement of wildlife laws The structure of the book allows the study of one topic area at a time progressing through simple questions to those that are more demanding Some of the questions require students to use their knowledge to interpret information provided in the form of photographs and legal texts
