Cooperative Learning in Higher Education Barbara Millis, 2023-07-03 Research has identified cooperative learning as one of the ten High Impact Practices that improve student learning. If you've been interested in cooperative learning but wondered how it would work in your discipline, this book provides the necessary theory and a wide range of concrete examples. Experienced users of cooperative learning demonstrate how they use it in settings as varied as a developmental mathematics course at a community college and graduate courses in history and the sciences and how it works in small and large classes as well as in hybrid and online environments. The authors describe the application of cooperative learning in biology, economics, educational psychology, financial accounting, general chemistry, and literature at remedial, introductory, and graduate levels. The chapters showcase cooperative learning in action at the same time introducing the reader to major principles such as individual accountability, positive interdependence, heterogeneous teams, group processing, and social or leadership skills. The authors build upon and cross-reference each other's chapters describing particular methods and activities in detail. They explain how and why they may differ about specific practices while exemplifying reflective approaches to teaching that never fail to address important assessment issues. **Biology** Joseph S. Levine, Kenneth R. Miller, 1998

Biology Peter King, Paul Farber, Michael C. Mix, 1992 *Difference Maker* Christian Moore-Anderson, 2024-08-09 Rarely have I been so convinced by the power of a new theoretical underpinning for a pedagogical technique such as the one presented here. Helen Darlington, Faculty Progress Leader for Science at South Wirral High School reviewed in School Science Review. From the author of *Biology Made Real*, *Difference Maker* reveals how to teach with students rather than merely teach to them. Without slides or worksheets, it shows how to provoke understanding through diagrams and dialogue, bringing forth a distinct teaching approach. Inside you'll find: The recursive teaching model. An evidence and theory inspired model for co-constructing meaning with students rather than just telling them or having them discover alone. Detailed examples of real lessons. The exact diagrams I've drawn in lessons and how I've built them step by step with students. Plus the questions I've asked at what point in the lesson and why. A theory informed how to guide for planning explanations. How to explain biological concepts by applying the variation theory of learning and enactive cognitive science. The resulting heuristic cuts planning time while vastly improving students' understanding. A theory informed how to guide for adaptive teaching. Adapting is essential in the moment as you never know how students will interpret a new explanation. With an original model for productive conversation, I unveil the types of questions that generate understanding and rich feedback for the teacher. These looping conversations trigger a coordinated co-regulation between teacher and students, ensuring mutual understanding before moving forward. A theory informed how to guide for co-constructing stock and flow diagrams. There are several benefits: 1. building these models clarifies your understanding to yourself and your students and 2. teaching becomes more conceptual, conversational, adaptive, and enjoyable. I show how to read design and

teach with them through detailed lesson examples Plus an appendix of 37 diagrams I've used with my classes A new model of curricular content metacontent The curriculum is not just a list of content of equal weight There are fundamental ideas that give meaning to the rest of the curriculum By including this metacontent in teaching a shared way of seeing and talking about our subjects emerges The first type of metacontent I explain is a set of principles that I share with students and discuss during every topic These unifying principles avoid the feeling that biology is just a lot of facts to learn The second type is understanding understanding itself I share a taxonomy of understanding that allows students to grasp what I expect of them in every topic I provide example sentences for each level of understanding questions I've asked to test my students understanding and answers my students have given A way of seeing and being Rather than a training manual with activities to follow this book provides teachers with a new conception of teaching learning and acting together in the classroom The novel insights of Difference Maker will inevitably change your perception **Human Biology** Sylvia S. Mader, 2008 The relationship between humans and other living things is emphasised in this text Students are provided with a firm grasp of how their bodies function and how the human population can become more fully integrated into the biosphere

Resources in education, 1988-08 **Forensic DNA Trace Evidence Interpretation** Duncan Taylor, Bas Kokshoorn, 2023-05-30 Forensic DNA Trace Evidence Interpretation Activity Level Propositions and Likelihood Ratios provides all foundational information required for a reader to understand the practice of evaluating forensic biology evidence given activity level propositions and to implement the practice into active casework within a forensic institution The book begins by explaining basic concepts and foundational theory pulling together research and studies that have accumulated in forensic journal literature over the last 20 years The book explains the laws of probability showing how they can be used to derive from first principles the likelihood ratio used throughout the book to express the strength of evidence for any evaluation Concepts such as the hierarchy of propositions the difference between experts working in an investigative or evaluative mode and the practice of case assessment and interpretation are explained to provide the reader with a broad grounding in the topics that are important to understanding evaluation of evidence Activity level evaluations are discussed in relation to biological material transferred from one object to another the ability for biological material to persist on an item for a period of time or through an event the ability to recover the biological material from the object when sampled for forensic testing and the expectations of the prevalence of biological material on objects in our environment These concepts of transfer persistence prevalence and recovery are discussed in detail in addition to the factors that affect each of them The authors go on to explain the evaluation process how to structure case information and formulate propositions This includes how a likelihood ratio formula can be derived to evaluate the forensic findings introducing Bayesian networks and explaining what they represent and how they can be used in evaluations and showing how evaluation can be tested for robustness Using these tools the authors also demonstrate the ways that the methods used in activity level evaluations are applied to questions

about body fluids There are also chapters dedicated to reporting of results and implementation of activity level evaluation in a working forensic laboratory Throughout the book four cases are used as examples to demonstrate how to relate the theory to practice and detail how laboratories can integrate and implement activity level evaluation into their active casework
