Pamphlets on Biology, 1922 **The Matter of Facts** Gareth Leng, Rhodri Ivor Leng, 2020-04-14 How biases the desire for a good narrative reliance on citation metrics and other problems undermine confidence in modern science Modern science is built on experimental evidence yet scientists are often very selective in deciding what evidence to use and tend to disagree about how to interpret it In *The Matter of Facts* Gareth and Rhodri Leng explore how scientists produce and use evidence They do so to contextualize an array of problems confronting modern science that have raised concerns about its reliability the widespread use of inappropriate statistical tests a shortage of replication studies and a bias in both publishing and citing positive results Before these problems can be addressed meaningfully the authors argue we must understand what makes science work and what leads it astray The myth of science is that scientists constantly challenge their own thinking But in reality all scientists are in the business of persuading other scientists of the importance of their own ideas and they do so by combining reason with rhetoric Often they look for evidence that will support their ideas not for evidence that might contradict them often they present evidence in a way that makes it appear to be supportive and often they ignore inconvenient evidence In a series of essays focusing on controversies disputes and discoveries the authors vividly portray science as a human activity driven by passion as well as by reason By analyzing the fluidity of scientific concepts and the dynamic and unpredictable development of scientific fields the authors paint a picture of modern science and the pressures it faces

American Book Publishing Record, 1997 **Science** John Michels (Journalist), 2008 *Modeling and Control in the Biomedical Sciences* H.T. Banks, 2013-03-12 These notes are based on i a series of lectures that I gave at the 14th Biennial Seminar of the Canadian Mathematical Congress held at the University of Western Ontario August 12 24 1973 and li some of my lectures in a modeling course that I have cotaught in the Division of Bio Medical Sciences at Brown during the past several years An

earlier version of these notes appeared in the Center for Dynamical Systems Lectures Notes series CDS LN 73 1 November 1973 I have in this revised and extended version of those earlier notes incorporated a number of changes based both on classroom experience and on my research efforts with several colleagues during the intervening period The narrow viewpoint of the present notes use of optimization and control theory in biomedical problems reflects more the scope of the CMC lectures given in August 1973 than the scope of my own interests Indeed my real interests have included the modeling process itself as well as the contributions made by investigators who employ the techniques and ideas of control theory systems analysis differential equations and stochastic processes Some of these contributions have quite naturally involved application of optimal control theory But in my opinion many of the interesting efforts being made in modeling in the biomedical sciences encompass much more than the use of control theory
