Communication Systems William B. Jones,1988 For seniors or first year graduate students this text is a general introduction to optical electronics with a strong emphasis on underlying physical properties and on the design of optical communications systems Jones provides balanced coverage of optical fibers transmitting devices photodetectors and systems and pays special attention to topics of emerging importance including integrated optical devices heterodyne detection and coherent optical systems The book s practical engineering orientation satisfies the latest ABET recommendations for more design instruction in electrical engineering courses **Optical Fiber Communication Systems** Leonid G. Kazovsky,Sergio

Benedetto,Alan E. Willner,1996 This comprehensive book makes the important technologies and mathematical concepts behind today s optical communications systems accessible and understandable to practicing and future electrical and communication engineers Featuring nearly 400 figures and over 900 equations the book provides the practical engineering details and mathematical tools necessary to analyze and design optical fiber systems Fiber Optics Communication. language English abstract With the evolvement of high speed and long distance data communication systems conventional band erbium doped fiber amplifiers C EDFAs are getting more attention in recent times Major advantage of the C band EDFA is that it provides the user to realize a system with wide bandwidth of 40 nm But from the reported works it is evident that for Gain enhancement in C band using EDFA is reported with the use of multiple stages multiple pumps Gain flattening filters etc However these techniques suffered from high cost complex techniques and low performance Here enhancement process was done through the narrowband Fiber Bragg Gratings FBG or fiber reflectors mirrors In this work a conventional band erbium doped fiber amplifier is proposed with high gain and less noise figure by incorporating the two fiber bragg gratings FBGs for amplified spontaneous noise reinjection Maximum ASE is emerged at 1565 nm for the at 55 dBm carrier powers Maximum gain is found out to be 48.16 dB with noise figure of 5.29 dBm Fiber amplifiers are crucial and fast growing field in the communication system The study of this field show that the formulation procedures of lasers generation and amplifier amplification displays a problematical process due to the factors affecting and changing amplifier and laser significances in a dynamic way Gain noise figure wavelength power flatness and power output are directly affected by any element or parameter inside the amplifier configuration The design parameters such as erbium ions concentration EDF length isolators wavelength division multiplexing WDM position pump power position circulators pump directions all of these elements and factors are affecting directly the amplifier output EDFA is an amplifier that is best used because of its low loss and high gain For communication there are two windows 1530-1560nm C band and 1560-1610nm L band

Introduction to Communication Systems Ferrel G. Stremler, 1990 This text presents a thorough introduction to communication systems with an emphasis on engineering aspects of signal waveform design and modulation Its presentation skillfully connects development of mathematical principles to examples from current operating communication systems Most importantly explanations and exercises are carefully motivated with practical applications Features Explanations of practical communication systems presented in the context of theory Over 300 excellent illustrations help students visualize difficult concepts and demonstrate practical applications Over 120 worked out examples promote mastery of new concepts plus over 130 drill problems with answers extend these principles A wide variety of problems all new to this edition including realistic applications computer based problems and design problems Coverage of current topics of interest such as fiber optics spread spectrum systems and Integrated Digital Services Networks

Fiber-Optic Communication Systems Govind P.
