The Economics of Scientific Misconduct James R. Wible, 2022-08-18 The Economics of Scientific Misconduct explores episodes of misconduct in the natural and biomedical sciences and replication failure in economics and psychology over the past half century Here scientific misconduct is considered from the perspective of a single discipline such as economics likely for the first time in intellectual history Research misconduct has become an important concern across many natural medical and social sciences including economics over the past half century Initially a mainstream economic approach to science and scientific misconduct draws from conventional microeconomics and the theories of Becker Ehrlich and C S Peirce's economy of research Then the works of Peirce and Thorstein Veblen from the 19th century point toward contemporary debates over statistical inference in econometrics and the failure of recent macroeconomic models In more contemporary economics clashes regarding discrimination and harassment have led to a Code of Professional Conduct from the American Economic Association and a Code of Ethics from one of its members The last chapter considers research ethics matters related to the COVID 19 pandemic There has been an explosion of research and some retractions More generally a concern with research ethics contributes to scientific progress by making some of its most difficult problems more transparent and understandable and thus possibly more surmountable This book offers valuable insights for students and scholars of research ethics across the sciences philosophy of science and social science and economic theory

A Tempered and Humane Economy Jannett Highfill, Patricia Podd Webber, 2014-12-23 A tempered and humane economy finds a balance between the market principle economic reward follows economic contribution and the family economic principle respect abilities respect needs Markets are tempered by the wisdom gained from family experiences in the way that steel is iron tempered by fire A humane economy meets the needs and aspirations of all persons in the way that a well tempered musical instrument allows for the playing of music in every key

without discord A Tempered and Humane Economy Markets Families and Behavioral Economics argues that economists must incorporate the insights of behavioral economics into their reflections on micro and macro economic policy The elephant in the room is how Americans are increasingly raising their children with an appropriate sense of entitlement and empowerment by involving them in decision making at home We raise our children to find or create a job they will love expecting that will make them highly productive Not all children have these advantages a problem we tackle head on but enough of them do to create a critical mass of young adults who will transform our economy in a positive way for persons everywhere along the income distribution Our vision for the U S Economy is one of tempered optimism and humane prosperity
