Year 6 Harcourt Education, 2003      **Essential Skills in Maths** Graham Newman, Ron Bull, 1997 This series is ideal for comprehensive reinforcement of essential skills to improve results and to develop a more thorough understanding The five books provide effective practice and consolidation of key mathematical skills for 11 16 year olds      *Hello Hi-Lo* Jeff Sanders, Nancy I. Sanders, 2010-05-11 Incorporating leveled reading within each script readers theatre plays offer teachers the flexibility to include readers of every ability in the same read aloud play Hello Hi Lo Readers Theatre Math offers a proven way for teachers to build reading fluency in their classrooms even if students do not all read at the same level The book offers 15 readers theatre plays each of which includes various levels of readability within one script The plays thus provide lower level readers the opportunity to follow along with accelerated reading parts building confidence by reading aloud at their own levels Each play includes speakers for three different grade levels of readability 4th grade and lower 5th 6th grade and 7th 8th grade Concepts are presented so that they are fluid among these grade levels Taking a cross curricular approach the scripts reinforce key math concepts and standards based math skills taught in the middle grades such as order of operations fractions inequalities positive and negative numbers and graphing on a coordinate plane Each play includes extended activities that will help the teacher incorporate the math concept into the classroom      **Primary Mathematics** Penelope Serow, Rosemary Callingham, Tracey Muir, 2019-08-07 Provides a comprehensive introduction to teaching and learning mathematics in today s classrooms      Teaching Statistics Using Baseball Jim Albert, 2022-02-04 Teaching Statistics Using Baseball is a collection of case studies and exercises applying statistical and probabilistic thinking to the game of baseball Baseball is the most statistical of all sports since players are identified and evaluated by their corresponding hitting and pitching statistics There is an active effort by people in the baseball community to learn more about baseball performance and strategy by the use of statistics This book illustrates basic methods of data analysis and probability models by means of baseball statistics collected on players and teams Students often have difficulty learning statistics ideas since they are explained using examples that are foreign to the students The idea of the book is to describe statistical thinking in a context that is baseball that will be familiar and interesting to students The book is organized using a same structure as most introductory statistics texts There are chapters on the analysis on a single batch of data followed with chapters on comparing batches of data and relationships There are chapters on probability models and on statistical inference The book can be used as the framework for a one semester introductory statistics class focused on baseball or sports This type of class has been taught at Bowling Green State University It may be very suitable for a statistics class for students with sports related majors such as sports management or sports medicine Alternately the book can be used as a resource for instructors who wish to infuse their present course in probability or statistics with applications from baseball The second edition of Teaching Statistics follows the same structure as the first edition where the case studies and exercises have been replaced by modern

players and teams and the new types of baseball data from the PitchFX system and fangraphs.com are incorporated into the text
