Cycles is a rendering engine, a program that transforms a 3D virtual environment into a 2D image or render. It does this by making calculations of the lighting and shading of the scene, taking into account factors such as the nature of physical objects, their textures, the effects, in order to produce the end result. From version 2.62 of Blender, Cycles comes ready installed, and since then the list of functionality has grown with new features in each release. This manual is aimed at those who have a basic knowledge of Blender and want to know the features, functions, and capabilities of Cycles rendering engine. A basic knowledge of Blender Render is recommended, yet not required. Even those who already have a good knowledge of Cycles will find this manual useful, since they can expand and deepen the knowledge of the tools and key techniques of lighting and shading. Francesco Milanese is a Blender Foundation Certified Trainer; he publishes video tutorials and books on Blender and other CG software. *Rendering Using Cycles in Blender* George Maestri, 2013.
