Blender D Architecture Buildings And Scenery:

Blender 3D 2.49 Allan Brito, 2010 Annotation Every type of construction _such as building a house a movie set or a virtual set_ needs a project These projects are made of a lot of documents and technical drawings which help in the construction of those buildings These technical drawings and documents are just fine but when you need to make a presentation of these projects for people who can t read technical drawings things can get a little difficult To make presentations for people who can t read technical drawings we use tools like Blender With Blender we can create texture and generate photo real images of a project These images are helpful to architects or companies to explain their projects in a better way This book will show you how to generate real looking architectural models quickly using Blender You can also create natural scenery landscapes plants various weather conditions environmental factors building materials such as wood metal brick and more using Blender As you walk through the chapters you will see that Blender is a tool designed to give you high productivity and fast access to tools and menus helping you to create 3D models quickly for 3D visualization You will learn how to add people to different scenes as well as other objects to an already existing photograph or a video making it easier to increase its realism The process begins by learning how Blender user interface works then moves on and starts to deal with 3D modeling In the 3D modeling chapters you will learn how to work with polygon based modeling for architecture creating walls and other architectural elements But a project is not only made of large scale models and this is the reason why you also learn to create 3D furniture In the section about advanced lighting for architecture you learn how to work with YafaRay to use global illumination techniques such as Photon Mapping and Path Tracing and create photo real renderings In the last section of the book dedicated to animation we will create linear animation based on keyframes and interactive 3D applications Create realistic models of building exteriors and interiors the surrounding environment and scenery Blender 3D Allan Brito, 2008
