

ECE 231 Review (Midterm)

1) Crystal Structures

- corner atoms are $1/8^{\text{th}}$ of the total atoms (since eight cube corners will touch when cubes are stacked, so the corner atom will be divided into eighths).
- face atoms are $1/2$ of the total atom (since two faces of the cube will touch when stacked, so the face atoms will be divided into two).

- a) **Simple Cubic:** Has eight corner atoms only, hence it has one atom per unit cell.
- b) **BCC:** The Body-Centered Cubic has eight corner atoms with one central atom, making it two whole atoms per unit cell.
- c) **FCC:** Face-Centered Cubic has eight corner atoms and 6 face atoms, making it four whole atoms per unit cell. The main lattice atoms can be thought of existing at $[0, 0, 0]$, $[1/2, 1/2, 0]$, $[0, 1/2, 1/2]$, $[1/2, 0, 1/2]$, creating four total atoms (these are coordinates, well Miller indices, on the FCC cell. If they don't make sense, review this concept on the next page talking about Miller indices. If it still doesn't make sense, review it from ECE 109!).
- d) **Diamond Lattice:** The diamond lattice can be viewed as two interpenetrating FCC lattices, shifted relatively by $[1/4, 1/4, 1/4]$.

***Note:** Additional lattice examples are in the course notes, page 1. Refer to these for Zincblende, Rock-salt, Wurtzite, and Hexagonal close-packed.*

2) Lattice and Reciprocal Lattice

Unit Cell: A unit cell is a component of a crystal that, once tacked together with pure translational repetition, reproduces the whole crystal.

Primitive Cell: The smallest, irreducible unit cell.

Basis: The group of unit cells that form the microscopic crystal by infinite repetition is called the basis.

Basis Vectors: Any fundamental lattice must be defined by 3 primitive translational vectors. This means that a position in the crystal can be described by $\mathbf{R} = n_1\mathbf{a} + n_2\mathbf{b} + n_3\mathbf{c}$, where \mathbf{a} , \mathbf{b} , \mathbf{c} are the translational (or basis) vectors and n_1 , n_2 , n_3 are integers. These vectors define the unit cell of the lattice!

Reciprocal Basis Vectors: The basis vectors of the reciprocal lattice. The exact formula for calculating \mathbf{a}^* , \mathbf{b}^* , \mathbf{c}^* is given in the notes (omitted here, since the midterm is concepts only). The reciprocal lattice of an FCC lattice is BCC and vice versa!

Bravais Lattice: The basis is formed in such a way that it forms a Bravais lattice. Every point of a Bravais lattice is equivalent to every other point (i.e., the arrangement of atoms in a crystal is the same when viewed from different lattice points).

Teaching and Learning Climate and Environmental Justice in Law Schools Richard Grimes, Stephen Levett, Rebecca Samaras, Rebecca Williams, 2025-09-23 Arguing for the critical importance of the topic within law school curricula whether for academic credit purposes or not this novel and exceptionally timely book explores a fundamental question should law schools teach about climate and environmental justice Despite the urgency of climate and environmental

protection issues many law schools present the topic as optional for students or don't engage at all. Arguing for the inclusion of climate and environmental justice at the earliest possible opportunity, this book presents study models in a variety of contexts and jurisdictions to support research into curriculum development and design. Case study examples of planned climate and environmental justice research and offerings at national and international levels are presented to support those who wish to include and/or expand provisions. This book also addresses concerns and initiatives of indigenous peoples demonstrating how partnerships between law schools and others remain integral to establishing sustainable learning initiatives. Ultimately promoting and supporting the study of climate and environmental justice in a legal and applied context, this book will be of interest to scholars, researchers, and academics involved with sustainability education, training, and leadership, legal education, and curriculum design. Clinical legal educators may also find the volume of interest.

Daily Graphic Yaw Boadu-Ayebofoh, 2005-01-27 **The Report: Egypt 2018**, Egypt has enjoyed a period of political stability since the turbulence of 2011-13 implementing a wide-ranging programme of economic reform. The process started with a drive to rebalance the economy through a number of challenging initiatives including the reduction of subsidies, the introduction of value added tax, and the liberation of the Egyptian pound. At the outset of 2018, these headline measures had been implemented and the government's focus has since shifted to the improvement of governance and the investment climate. This effort includes the promulgation of the Civil Service Reform Law aimed at cutting the large public sector wage bill and an array of legislation designed to remove investment barriers such as the Industrial Licensing Law, the Investment Law, and the Company Law. *Collegiate News and Views*, 1983
