Engineering Agile Big-Data Systems Kevin Feeney, Jim Davies, James Welch, 2022-09-01 To be effective data intensive systems require extensive ongoing customisation to reflect changing user requirements organisational policies and the structure and interpretation of the data they hold Manual customisation is expensive time consuming and error prone In large complex systems the value of the data can be such that exhaustive testing is necessary before any new feature can be added to the existing design In most cases the precise details of requirements policies and data will change during the lifetime of the system forcing a choice between expensive modification and continued operation with an inefficient design Engineering Agile Big Data Systems outlines an approach to dealing with these problems in software and data engineering describing a methodology for aligning these processes throughout product lifecycles It discusses tools which can be used to achieve these goals and in a number of case studies shows how the tools and methodology have been used to improve a variety of academic and business systems Chemical Abstracts, 2002 Aqualine Abstracts ,1985 **Abstracts International** ,2006 Science of Selenium Rahman Kalilur, 2019-12-11 Step by step guide to understand key concepts for Selenium Automation using examples to shine in your interview for test automation roles Key Featuresa Acquire Selenium skills to do independent test automation projects aLearn the basics of Selenium Web Driver for test automation using Seleniuma Understand Page Object Model including how and when they re used in test automationa Understand the approach for building a test automation frameworka Build Selenium test automation scripts using various languages Java Python JavaScript Node JS and Rubya Learn how to report and integrate with CI tools for test automation a Get some professional tips for handing interviews and test automation approacha Implement cross browser testing scenarios using Selenium Grid and commercial tools and servicesDescriptionSoftware Engineering has taken massive strides with a multitude of technology innovations With several changes being introduced development of products and their integration into the market understanding of mobile devices and user interface channels across a plethora of platforms is getting complex day by day In addition since the process or procedures of software testing for products and applications can become an act of boiling the ocean the role of test automation is crucial while dealing with such challenges.
