

11 Generic OBD

11.1 Introduction

Generic OBD is a program used to read out data from the car's built-in statutory diagnostic functions, the primary function of which is to monitor emission-related components' functions. In Europe this standard function is called *eOBD*, in the USA it is called *OBD2*, and in Japan it is called *JOBD*. We have decided to collect these standards in one and the same software. It also contains all standards for reading out statutory OBD on heavy vehicles.

11.2 Connecting to vehicle

Immediately when *eOBD* is chosen, either using the function key in the top right corner or using the car selection, connection to the vehicle is started. Therefore, it is important that the vehicle has been prepared for diagnosis before you press the button. The vehicle shall have the ignition on or the engine running to enable connection to all systems.

11.3 General use of the program

The program is controlled using the function buttons in function menu 1, function menu 2, and with buttons in the work area. Each function/mode is described below. Generic OBD is available in two user levels. To change level, go to the Settings menu and select/deselect "Generic OBD Advanced mode". When the program is in Advanced mode all functions are available. In User mode functions for legislation verification of the vehicle manufacturer is hidden. We highly recommend User mode for use in workshops and with the intention to diagnose the vehicle. Note that when the car does not support chosen function/mode, then "not supported by vehicle" is shown.

11.3.1 Information

The first window that appears is the information window containing general information about the vehicle you are connected to.

- **Available control units.** The list with available control units includes all those control units that support the *eOBD* standard.
- **Information.** In the list under the heading information, specific data is shown for the chosen ECU. To choose another ECU, click on it in the list with available control units. This box shows three different values, such as: MFL status, quantity of fault codes (permanently), as well as which communication standard is being used.
- **Main information.** Main information shows which communication type that the vehicle uses to communicate and the total quantity of fault codes from all control units. This also shows if the MFL is fit.
- **Readiness tests.** The list for readiness tests shows tests for chosen ECU, and if they are supported by the control unit. The different values that can be assumed are done or not done. The following tests are standard in OBD II/eOBD:

- Misfires
- Fuel system
- Component test
- Catalytic converter
- Preheated catalytic converter

- EVAP
- Secondary air system
- A/C-system
- Preheated lambda (oxygen) sensor
- EGR-system
