**Data Science for Librarians** Yunfei Du, Hammad Rauf Khan, 2020-03-26 This unique textbook intersects traditional library science with data science principles that readers will find useful in implementing or improving data services within their libraries. Data Science for Librarians introduces data science to students and practitioners in library services. Writing for academic public and school library managers, library science students, and library and information science educators, authors Yunfei Du and Hammad Rauf Khan provide a thorough overview of conceptual and practical tools for data librarian practice. Partially due to how quickly data science evolves, libraries have yet to recognize core competencies and skills required to perform the job duties of a data librarian. As society transitions from the information age into the era of big data, librarians and information professionals require new knowledge and skills to stay current and take on new job roles such as data librarianship. Such skills as data curation, research, data management, statistical analysis, business analytics, visualization, smart city data, and learning analytics are relevant in library services today and will become increasingly so in the near future. This text serves as a tool for library and information science students and educators working on data science curriculum design.

**The Programmer** Michael Di Loreto, 2025-01-06 This is the true story of an ordinary Programmer who did extraordinary things. His career as a professional Computer Programmer began in 1968 and ended in 2017. Without any formal education, he was self-taught and very successful. That is, he had good jobs and made good money, not that he got rich or famous. A hard-core Programmer for 49 years, he never went into management or did anything else. Having had every title from Systems Analyst to Software Engineer, he still insists on the old-fashioned Programmer to describe his work. In addition to recounting his job experiences, he gives lessons in programming. These lessons are not so much about technology as about the attitudes and behaviors that make a successful problem solver. He addresses himself to other Programmers, but it's not too technical for general readers. He also talks about his long-time hobby of studying foreign languages and linguistics. There's a little but not much about his personal life, but his life corresponds with the modern history of computers and programming. He was born in 1950, about the same time as the introduction of the first commercially available digital computer, UNIVAC I. He got his first job as a Programmer in 1968, programming a third-generation computer, the UNIVAC 9300.
