Blanching Medieval Recipe:

Cooking and Dining in Medieval England Peter C. D. Brears, 2008 The history of medieval food and cookery has received a fair amount of attention from the point of view of recipes of which many survive and of the general context of feasts and feasting It has never as yet been studied with an eye to the real mechanics of food production and service the equipment used the household organisation the architectural arrangements for kitchens store rooms pantries larders cellars and domestic administration This new work by Peter Brears perhaps Britain's foremost expert on the historical kitchen looks at these important elements of cooking and dining He also subjects the many surviving documents relating to food service household ordinances regulations and commentaries to critical study in an attempt to reconstruct the precise rituals and customs of dinner An underlying intention is to rehabilitate the medieval Englishman as someone with a nice appreciation of food and cookery decent manners and a delicate sense of propriety and seemliness To dispel the myth that is of medieval feasting as an orgy of gluttony and bad manners usually provided with meat that has gone slightly off masked by liberal additions of heady spices A series of chapters looks at the cooking departments in large households the counting house dairy brewhouse pastry boiling house and kitchen These are illustrated by architectural perspectives of surviving examples in castles and manor houses throughout the land Then there are chapters dealing with the various sorts of kitchen equipment fires fuel pots and pans Sections are then devoted to recipes and types of food cooked The recipes are those which have been used and tested by Peter Brears in hundreds of demonstrations to the public and cooking for museum displays Finally there are chapters on the service of dinner the service departments including the buttery pantry and ewery and the rituals that grew up around these Here Peter Brears has drawn a wonderful strip cartoon of the serving of a great feast the washing of hands the delivery of napery the tasting for poison etc which will be of permanent utility to historical re-enactors who wish to get their details right

Debasement Kevin Butcher,2020-04-30 The debasement of coinage particularly of silver was a common feature of pre modern monetary systems Most coinages were issued by state authorities and the condition of a coinage is often seen rightly or wrongly as an indicator of the broader fiscal health of the state that produced it While in some cases the motives behind the debasements or reductions in standards are clear in many cases the intentions of the issuing authorities are uncertain Various explanations have been advanced fiscal motives such as a desire to profit or a to cover a deficit caused by the failure to balance expenditure and revenues monetary motives such as changing demand for coined money or a desire to maintain monetary stability in the face of changing values of raw materials or labour costs pressure from groups within society that would profit from debasement misconduct at the mint or the decline of existing monetary standards due to circulation and wear of the coinage in circulation Certain explanations have tended to gain favour with monetary historians of specific periods partly reflecting the compartmentalization of scholarship Thus the study of Roman debasements emphasizes fiscal deficits whereas medievalists are often more prepared to consider monetary factors as contributing to debasements To some extent these different approaches are a reflection of discrepancies in the amount of documentary evidence available for the respective periods but the divide also underlines fundamentally different approaches to the function of coinage Romanists have preferred to see coins as a medium for state payments whereas medievalists have often emphasized exchange as an important function of currency The volume is inter disciplinary in scope Apart from bringing together monetary historians of different periods it also contains contributions from archaeometallurgists who have experience with the chemical and physical composition of coins and technical aspects of production of base alloys
