Readers will learn how to use Excel to build a dataset, how to handle variables and notes, rearrangements and edits to data, check datasets dealing with typographic errors, data validation and numerical errors, make sense of data including datasets for regression and correlation, summarizing data with averages and variability and visualizing data with graphs, pivot charts and sparklines. Explore regression data, finding, highlighting and visualizing correlations. Explore time related data using pivot tables, sparklines and line plots. Explore association data, creating and visualizing contingency tables. Explore differences, pivot tables and data visualizations including box whisker plots. Share data methods for exporting and sharing your datasets, summaries and graphs.
