- **Arterial bleeding:** Typically bleeding from an open artery is bright red in color due to the high oxygen content and spurts (pulsates) in time with the contractions of the heart
- **Venous bleeding:** Bleeding from an open vein is much darker red color due to the low oxygen content and flows more steadily.
- **Capillary bleeding:** Bleeding from damaged capillary vessels is dark red and will ooze from the wound slowly but steadily. This type of bleeding often stops with no medical intervention as the body forms a clot
