West's Pacific Digest, Beginning 585 P.2d ,1990 West's Pacific Digest ,1978 Crime Scene Forensics Handbook Tom Martin, 2010 This unique field guide filled with ready to use documentation forms will help you understand and leverage one of the most important and telling elements at a crime scene Blood Analyze bloodstain patterns Use of blood to determine level of force used on a victim proximity of an attacker type of weapon's used Properly collect and document blood evidence without compromising the integrity of the evidence and the scene Follow appropriate protocols for blood swabbing Ensure that 5 key initial scene observations are covered Expertly designed to provide on scene tips investigatory checklists and immediately usable support documents Bloodstain Pattern Analysis Sonya Ching-Ying Siu, 2012 Bloodstain pattern analysis BPA provides significant evidentiary value in crime scene interpretation and reconstruction but many aspects of BPA are controversial due to the heavy reliance on qualitative and subjective interpretation For example the differentiation between so called medium and high velocity impact spatter patterns legacy terminology typically associated with blunt instrument and gunshot impacts respectively has traditionally relied on visual assessment of the average drop size in the pattern Because this methodology is subjective and susceptible to context bias most BPA organizations recommend against even attempting to describe the velocity that creates a spatter pattern despite the clear forensic value of such determinations in crime scene interpretation In this work we develop a quantitative methodology using digital image analysis techniques to differentiate medium and high velocity impact spatter patterns in an objective manner Bloodstain spatter

patterns were created under controlled conditions by impacting either blunt instruments or bullets into blood soaked sponges The impact velocities were determined using high speed video and the resulting spatter patterns were digitally imaged at high resolution then analyzed using custom image analysis algorithms Our analysis of 72 unique spatter patterns comprising more than 490 000 individual droplets indicates that the mean drop size in a gunshot spatter pattern is at most 30% smaller than the mean drop size in blunt instrument patterns In contrast we demonstrate that the spatially dependent size distribution of droplets i e drop sizes as a function of position in the pattern significantly differs between bullet and blunt instrument patterns with a spatially dependent metric as much as 400% larger for bullet impacts Our findings suggest that quantitative metrics involving the spatial distribution of droplets within a spatter pattern can be useful for objective differentiation between blunt instrument and gunshot spatter patterns **Death Investigation** Terry L.
