Component-Based Software Engineering Grace A. Lewis, Iman Poernomo, Christine Hofmeister, 2009-06-18 The 2009 Symposium on Component Based Software Engineering CBSE 2009 was the 12th in a series of successful events that have grown into the main forum for industrial and academic experts to discuss component technology. Component based software engineering CBSE has emerged as the underlying technology for the assembly of executable software systems. In essence, CBSE is about composing computational building blocks to construct larger building blocks that fulfill client needs. Most software engineers are involved in some form of component based development. Nonetheless, the implications of CBSE adoption are wide reaching and its challenges grow in tandem with its uptake, continuing to inspire our scientific speculation. Component based development necessarily involves elements of software architecture, modular software design, software verification, testing, configuration, and deployment. This year's submissions represent a cross section of CBSE research that touches upon all these aspects. The theoretical foundations of component specification, composition, analysis, and verification continue to pose research challenges. What exactly constitutes an adequate semantics for communication and composition so that bigger things can be built from smaller things? How can formal approaches facilitate predictable assembly through better analysis? We have grouped the proceedings into two sub-themes that deal with these issues: component models and communication and composition. At the same time, the world is changing.

Unsettled Issues on Sensor Calibration for Automotive Aftermarket Advanced Driver-Assistance Systems John Waraniak, 2021-03-18 Many automotive industry safety advocates have been pushing for greater market penetration for active safety and advanced driver assistance systems (ADAS) with the goal of ending deaths due to car crashes. However, there are far-reaching implications for the collision repair specialty equipment and performance aftermarket sectors. After a collision or modification, the ADAS system functionality must be preserved to maintain driver, passenger, and road user safety. To do this, sensor recalibration and ADAS functional safety validation and documentation after repair, modification, or accessorizing are necessary. *Unsettled Issues on Sensor Calibration for Automotive Aftermarket ADAS* tackles the challenges of accelerating the pace of ADAS implementation, increasing industry understanding of systems, sensors, software, controllers, and minimizing the overwhelming variety of sensor calibration procedures and automaker targets. Additionally, this report addresses the liability concerns that are challenging the industry as it seeks to move forward safely.
