Bloom,2002 The various possibilities for the origin progenitors of gamma ray bursts GRBs manifest in differing observable properties Through deep spectroscopic and high resolution imaging observations of some GRB hosts I demonstrate that well localized long duration GRBs are connected with otherwise normal star forming galaxies at moderate redshifts of order unity Using high mass binary stellar population synthesis models I quantify the expected spatial extent around galaxies of coalescing neutron stars one of the leading contenders for GRB progenitors I then test this scenario by examining the offset

distribution of GRBs about their apparent hosts making extensive use of ground based optical data from Keck and Palomar and space based imaging from the Hubble Space Telescope The offset distribution appears to be inconsistent with the coalescing neutron star binary hypothesis and similarly black hole neutron star coalescences instead the distribution is statistically consistent with a population of progenitors that closely traces the ultra violet light of galaxies This is naturally explained by bursts which originate from the collapse of massive stars collapsars This claim is further supported by the unambiguous detections of intermediate time approximately three weeks after the bursts emission bumps which appear substantially more red than the afterglows themselves I claim that these bumps could originate from supernovae that occur at approximately the same time as the associated GRB if true GRB 980326 and GRB 011121 provide strong observational evidence connecting cosmological GRBs to high redshift supernovae and implicate massive stars as the progenitors of at least some long duration GRBs

Starbursts Richard de Grijs, Rosa M. González Delgado, 2006-05-11 Starbursts are important features of early galaxy evolution Many of the distant high redshift galaxies we are able to detect are in a starbursting phase often apparently provoked by a violent gravitational interaction with another galaxy In fact if we did not know that major starbursts existed these conference proceedings testify that we would indeed have difficulties explaining the key properties of the Universe These conference proceedings cover starbursts from the small scale star forming regions in nearby galaxies to galaxy wide events at high redshifts one of the major themes of the conference proved to be scalability i e can we scale up the small scale events to describe the physics on larger scales The key outcome of this meeting and these proceedings is a resounding yes to this fundamental yet profound question The enhanced synergy facilitated by the collaboration among observers using cutting edge ground and space based facilities theorists and modellers has made these proceedings a true reflection of the state of the art in this very rapidly evolving field
