The New Face of Evaluation and Management Kellie Hall, 2025-06-30 Physicians want to care for patients not spend their time documenting in an electronic medical record Physicians are always complaining about the amount of time they spend documenting patient care in support of medical billing through an evaluation and management coding system E M New guidelines were created to lessen the time a physician provider spends on documentation as many of the mandatory elements are no longer a requirement for calculating a code level Previously an E M evaluation and management note required documentation of history exam and medical decision making with required elements in each component to support a level for payment If an element was missing the level of service was not supported therefore the code was lowered resulting in a lower reimbursement for the physician provider The new guidelines eliminated the requirement of History and Exam as part of the calculation of a code level Yes an appropriate history and exam are required this supports good patient care but when it comes to reimbursement they are no longer part of the picture The overall system is not difficult if time is taken to understand the elements and how they are applied in the documentation Documentation is a word game always has been the authors focus is to show what words to use to lessen the time but still convey the complexity of the patient s condition and how the physician provider determines a treatment plan which includes the risk to the patient to satisfy the Coding guidelines initiated by Medicare and American Medical Association This book evaluates the new guidelines and brings them into prospective so physicians providers coders can easily understand how to document and calculate the level of service for reimbursement This is not a cumbersome book or complicated but straight to the point The main goal of the book is to educate physicians nurses and coders on what documentation is really required and what has just become habit over the last 30 years

2018 Risk Adjustment and Hierarchical Condition Category Coding Guide The Coders Choice LLC, 2017-12-15 Risk Adjustment and Hierarchical Condition Category HCC coding is a payment model mandated by the Centers for Medicare and Medicaid Services CMS in 1997 Implemented in 2003 this model identifies individuals with serious or chronic illness and assigns a risk factor score to

the person based upon a combination of the individual's health conditions and demographic details. The individual's health conditions are identified via International Classification of Diseases 10 (ICD 10) diagnoses that are submitted by providers on incoming claims. There are more than 9000 ICD 10 codes that map to 79 HCC codes in the Risk Adjustment model. CMS requires documentation in the person's medical record by a qualified health care provider to support the submitted diagnosis. Documentation must support the presence of the condition and indicate the provider's assessment and/or plan for management of the condition. This must occur at least once each calendar year in order for CMS to recognize the individual continues to have the condition. The Centers for Medicare and Medicaid Services (CMS) Risk Adjustment Model includes nearly 80 HCC categories of chronic illnesses with thousands of diagnosis codes. Beginning HCC coders need solid instruction on HCC coding to properly map codes and ensure the organization receives the reimbursement payments. This webinar educates the audience on HCC coding and discusses popular risk adjustment coding guidelines. It identifies what makes a document valid for submission including which sources of documentation should or should not be used. Attendees will have the opportunity to review common mistakes like a lack of specificity in provider documentation. Often overlooked conditions which are frequently undocumented by the provider are also explained. The presenter will give a brief demonstration on how to determine if a condition is reimbursed or not as well as a case study showing how to apply the theories learned. Through clarification of codes and specific examples, the speaker underscores the importance of provider documentation and its impact on reimbursement. This session is a great overall introduction for beginners and the perfect refresher course for those who have already begun and want to enhance their knowledge in the field.

Objectives: Learn about HCC coding and risk adjustment coding guidelines. Demonstrate how mapping tools help to properly identify HCCs. Understand the importance of provider documentation and its impact on reimbursement. Risk adjustment in the CMS HCC model characteristics is based on multiple factors which are analyzed and reduced to offer the right risk management plan for a patient. The factors that influence risk adjustment include:

- Hierarchy of diseases: Ensuring that diagnoses are included in the appropriate disease groups and are in accordance with the necessary hierarchy.
- Disease Interactions: The additional factors that recognize and assess the severity of multiple conditions.
- Demographic Variables: These focus on the demographic of the patient's living conditions and demographics.
- Diagnostic Sources: CMS recognizes diagnoses from a hospital's inpatient, outpatient, and physician settings only.

Prospective model: The diagnoses based on last year are used to extrapolate the possible payments for the next year.

Multiple conditions: A patient can have multiple HCC categories assigned to them based on their medical conditions. In some cases, specific conditions can override others when documenting. This is based on the strict hierarchy of the coding procedures. HCCs are captured once a year every year in order for the CMS to reimburse payments to the Medicare Advantage. However, diagnoses from previous years are used to establish capitation payments to the Medicare Advantage plan.
