## Chi Square Practice Problems

Solve all problems using a chi square analysis. You must use statistics to support your answers.

1. A zookeeper hypothesizes that changing the intensity of the light in the primate exhibits will reduce the amount of aggression between the baboons. In exhibit A, with a lower light intensity, he observes 36 incidences of aggression over a one month period. In exhibit B, with normal lights, he observes 42 incidences of aggression. Should he support or reject his hypothesis?

- **Identify Null Hypothesis:** There will be no differences between aggressive behavior in Exhibit A with lower light intensity than in Exhibit B with higher light intensity.
- **Identify Alternative Hypothesis Hypothesis :** The animals in exhibit A with lower light intensity will have a different number of incidence of aggression than an animal in higher light intensity in exhibit B.
- **Calculate expected values:**

$$\text{Total incidence: } 36 + 42 = 78$$

$$\text{Expected} = \text{Total} / \# \text{ of categories}$$

$$\text{Expected} = 78/2 = 39$$

- **Make a table**

| Category                      | Observed Freq.(O) | Expected Freq.(E) | O-E          | O-E Squared | O-E squared/E  |
|-------------------------------|-------------------|-------------------|--------------|-------------|----------------|
| Exhibit A Low Light Intensity | 36                | 39                | $36-39 = -3$ | 9           | $9/39 = 0.23$  |
| Exhibit B normal light        | 42                | 39                | $42-39 = 3$  | 16          | $16/39 = 0.41$ |
| Totals                        | 78                |                   |              |             | 0.64           |

## **Chi Squared Problems:**

An Introduction to Statistical Problem Solving in Geography J. Chapman McGrew, Jr., Charles B. Monroe, 2009-04-22

Written for undergraduate geography majors and entry level graduate students with limited backgrounds in statistical analysis and methods McGrew and Monroe provide a comprehensive and understandable introduction to statistical methods in a problem solving framework Engaging examples and problems are drawn from a variety of topical areas in both human and physical geography and are fully integrated into the text Without compromising statistical rigor or oversimplifying the authors stress the importance of written narratives that explain each statistical technique After introducing basic statistical concepts and terminology the authors focus on nonspatial and spatial descriptive statistics They transition to inferential problem solving including probability sampling and estimation before delving deeper into inferential statistics for geographic problem solving The final chapters examine the related techniques of correlation and regression A list of major goals and objectives is included at the end of each chapter allowing students to monitor their own progress and mastery of geographic statistical materials An epilogue offering over 150 geographic situations gives students a chance to figure out which statistical technique should be used for a particular situation
