that authors Ed Tittel Mary Madden and James Michael Stewart bring to your aid      *Accounting Information Systems* Marshall B. Romney,Paul John Steinbart,2003 This text aims to provide students with the knowledge they need to pursue successful careers in accounting It reflects how information technology is altering the nature of accounting and discusses how accountants can improve the design and function of accounting information systems      *Communications-computers, Teamed for the '90's* ,1986      Firewall Fundamentals Wesley J. Noonan,Ido Dubrawsky,2006 Increasing reliance on the Internet in both work and home environments has radically increased the vulnerability of computing systems to attack from a wide variety of threats Firewall technology continues to be the most prevalent form of protection against existing and new threats to computers and networks A full understanding of what firewalls can do how they can be deployed to maximum effect and the differences among firewall types can make the difference between continued network integrity and complete network or computer failure Firewall Fundamentals introduces readers to firewall concepts and explores various commercial and open source firewall implementations including Cisco Linksys and Linux allowing network administrators and small office home office computer users to effectively choose and configure their devices      Computer Network Architectures and Protocols Paul Eliot Green,1982 This is a book about the bricks and mortar out of which are built those edifices that so well characterize late twentieth century industrial society networks of computers and terminals Such computer networks are playing an increasing role in our daily lives somewhat indirectly up to now as the hidden servants of banks retail credit bureaus airline reservation offices and so forth but soon they will become more visible as they enter our offices and homes and directly become part of our work entertainment and daily living The study of how computer networks work is a combined study of communication theory and computer science two disciplines appearing to have very little in common The modern communication scientist wishing to work in this area finds himself in suddenly unfamiliar territory It is no longer sufficient for him to think of transmission modulation noise immunity error bounds and other abstractions of a single communication link he is dealing now with a topologically complex interconnection of such links And what is more striking solving the problems of getting the signal from one point to another is just the beginning of the communication process The communication must be in the right form to be routed properly to be handled without congestion and to be understood at the right points in the network The communication scientist suddenly finds himself charged with responsibility for such things as code and format conversions addressing flow control and other abstractions of a new and challenging kind      NT Server 4 in the Enterprise Jeffrey Williams,David Johnson,1998 This Exam Prep was created to help networking officials gain knowledge that directly applies to the Microsoft certification exam for NT Server 4 in the Enterprise The book covers all topics necessary to pass the test including OSI models network hardware and topology data transmissions and network protocols network and Internet names remote access and security and hardware and protocols      **Build your own network : handbook** Poyin Chu,1999
