1. **Big Idea 3: Information Storage, Transmission, and Response** ~ "Identifying Insulin as a Chemical Messenger" (p764)
 - a. **Why did scientists have a difficult time isolating insulin initially?** Scientists had a difficult time because enzymes in the digestive juices destroyed insulin, a type of protein during the isolation process.
 - b. **How did they, Banting and Best, isolate insulin?** They tied off the pancreatic duct which led to the destruction of digestive juices and not the production of insulin.
 - c. **What were the four experimental procedures they used to identify that insulin was a chemical messenger?** Four experimental procedures are identifying the source of the chemical, identifying the effect to be studied, isolating the chemical, and show that the chemical has the desired effect.
 - d. **How is insulin synthesized today?** Insulin today, is synthesized recombinant DNA technology, using the bacterium *E. coli* to produce the hormone.
