Joseph Cooper,Leslie Lipper,David Zilberman,2006-05-27 The topics addressed in this book are of vital importance to the survival of humankind Agricultural biodiversity encompassing genetic diversity as well as human knowledge is the base upon which agricultural production has been built and protecting this resource is critical to ensuring the capacity of current and future generations to adapt to unforeseen challenges Agricultural biodiversity underpins the productivity of all agricultural systems and is particularly important for poor and food insecure farmers who maintain highly diverse production systems in response to the marginal and risky production conditions they operate under Understanding the importance of agricultural biodiversity in the livelihoods of the food insecure and enhancing its performance through the use of a variety of tools including biotechnology is a critically important issue in the world today where over 800 million people have insufficient food to meet minimum needs A strong theme that runs throughout the book is the importance of good public policy interventions to promote the provision of public goods associated with agricultural biodiversity conservation and directing biotechnology development to meet the needs of the poor The book s primary innovation is that it describes the relationship between biotechnology and plant genetic diversity and puts these in the context of agricultural development Both the conservation of plant genetic diversity and agricultural biotechnology have received extensive examination but the linkages between the two

have not despite the apparently obvious relationship between the two

Global Action for Biodiversity Timothy Swanson, 2013-11-19 At the Rio Earth Summit in 1992 the nations of the world adopted the convention on Biological Diversity Since then over 160 countries have ratified the Convention three Conferences of the Parties have taken place and a permanent secretariat has been established Despite this there remains a lot of uncertainty and even more controversy about what the Convention was intended to accomplish and how it was to do so This book published in association with the IUCN The World Conservation Union sets out to answer some of these questions by recounting the history of the movements leading up to the Convention but especially by analysing the forces giving rise to the problem It provides a specific set of policy prescriptions intended to facilitate the development of institutions and obligations within the international community which will give real effect to the aspirations of the Convention and the ensure that it has some real effect at ground level The author begins with an overview of the issues and then develops the basic nature of the problems within a bio economic framework He highlights the gaps in the Convention which remain to be filled offers detailed explanations of the concepts involved and describes the nature of the solutions required Thus he sets out a detailed plan for global action in support of an effective international convention for the conservation of biological diversity The book is an excellent introduction to a very topical debate and a valuable reference point for conservationists policy makers and students of development studies environmental studies environmental policy and conservation biology
