

Image Formation by Concave Mirror

| Position of Object | Position of Image | Nature and Size of Image |
|---|---|--|
| At infinity | At focus or in the focal plane | Real, inverted, extremely diminished in size |
| Beyond the centre of curvature but at finite distance from mirror | Between focus and the centre of curvature | Real, inverted and diminished |
| At the centre of curvature | At the centre of curvature | Real, inverted and same size as that of object |
| Between focus and centre of curvature | Beyond the centre of curvature | Real, inverted and magnified |
| At the focus | At infinity | Real, inverted and extremely magnified |
| Between the pole and focus | Behind the mirror | Virtual, erect and magnified |

Image Formation by Convex Mirror

| Position of Object | Position of Image | Nature and Size of Image |
|---|---|---|
| At infinity | At the principal focus, behind the mirror | Virtual, erect and extremely diminished |
| Between infinity and the pole (i.e. at finite distance) | Between the principal focus and the pole, behind the mirror | Virtual, erect and diminished |

7. Sign Conventions for Reflection by Spherical Mirrors

- For concave mirror f , u and v are always negative $(-)$.
- If image is formed behind concave mirror, then v is taken positive $(+)$ and if image is formed in front of the mirror, then v is taken negative $(-)$.
- For convex mirror f and R are positive $(+)$ and u is negative $(-)$. In convex mirror, images formed behind the mirror, then v is taken as positive $(+)$.
- Distances measured perpendicularly above the principal axis (along Y -axis) are taken as positive and distances below the principal axis (along Y' -axis) are taken as negative.

8. Mirror Formula

- In a spherical mirror, the distance of object (u), distance of image (v) and focal length (f) are related as by the formula
- The mirror formula is expressed as

$$\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$$

where, u = object distance from mirror,

v = image distance from mirror

and f = focal length of the mirror.

9. Magnification by Spherical Mirror

It is expressed as the ratio of height of image to the height of object.

$$\text{Magnification, } m = \frac{h_i}{h_o}$$

or

$$m = -\frac{v}{u}$$

10. Refraction of Light

- Change in path of a light ray as it passes from one transparent medium to another medium is called refraction of light.
- When light travels from a rarer medium to a denser one, it bends towards the normal ($i > r$) and when travels from a denser medium to a rarer one, it bends away from the normal ($i < r$).

where, i = angle of incidence, r = angle of refraction.

- (i) **Cause of refraction** Speed of light is different in different media, i.e. more in rarer medium and comparatively less in denser medium. So, when light enters a denser medium, its speed reduces and it bends towards the normal and when it enters a rarer medium, its speed increases and it bends away from the normal.
