

Chapter 53, AP Biology Reading Guide

1. $D=M/V$
2. The density of a population is the number of individuals per unit area or volume.
Dispersion is the pattern of spacing among individuals within the boundaries of the population
3. Additions to populations occur through birth and immigration, the influx of new individuals from other areas.

Death and emigration, the movement of individuals out of a population and into other locations, remove individuals from a population.
4. A uniform pattern of dispersion may result from direct interactions between individuals in the population.
5. Demography is the study of the vital statistics of populations and how they change over time.

Life tables are age-specific summaries of the survival pattern of a population
6. This kind of survivorship occurs in some rodents, various invertebrates, some lizards, and some annual plants.
7. A reproductive table, or fertility schedule, is an age-specific summary of the reproductive rates in a population.
8. The traits that affect an organism's schedule of reproduction and survival make up its life history.
