Optimization of Trustworthy Biomolecular Quantitative Analysis Using Cyber-Physical Microfluidic Platforms Mohamed Ibrahim, Krishnendu Chakrabarty, 2020-05-31 A microfluidic biochip is an engineered fluidic device that controls the flow of analytes thereby enabling a variety of useful applications According to recent studies the fields that are best set to benefit from the microfluidics technology also known as lab on chip technology include forensic identification clinical chemistry point of care PoC diagnostics and drug discovery The growth in such fields has significantly amplified the impact of microfluidics technology whose market value is forecast to grow from 4 billion in 2017 to 13.2 billion by 2023 The rapid evolution of lab on chip technologies opens up opportunities for new biological or chemical science areas that can be directly facilitated by sensor based microfluidics control For example the digital microfluidics based ePlex system from GenMark Dx enables automated disease diagnosis and can bring syndromic testing near patients everywhere However as the applications of molecular biology grow the adoption of microfluidics in many applications has not grown at the same pace despite the concerted effort of microfluidic systems engineers Recent studies suggest that state of the art design techniques for microfluidics have two major drawbacks that need to be addressed appropriately 1 current lab on chip systems were only optimized as auxiliary components and are only suitable for sample limited analyses therefore their capabilities may not cope with the requirements of contemporary molecular biology applications 2 the integrity of these automated lab on chip systems and their biochemical operations are still an open question since no protection schemes were developed against adversarial contamination or result manipulation attacks *Optimization of Trustworthy Biomolecular Quantitative Analysis Using Cyber Physical Microfluidic Platforms* provides solutions to these challenges by introducing a new design flow based on the realistic modeling of contemporary molecular biology protocols It also presents a microfluidic security flow that provides a high level of confidence in the integrity of such protocols In summary this book creates a new research field as it bridges the technical skills gap between microfluidic systems and molecular biology protocols but it is viewed from the perspective of an electronic systems engineer
