Mark Volkmann,2024-08-14 htmx is a library that adds logic and server interaction to HTML you get the effect of using a front end SPA framework without writing front end code Use any server side programming language and framework to build server applications with endpoints that simply return snippets of HTML Dynamically update portions of the current web page from HTTP responses Add interactivity with JavaScript and libraries such Alpine and _hyperscript Make your apps more secure by escaping user supplied content and specifying a Content Security Policy Go beyond basic HTTP requests with WebSockets and server sent events The htmx JavaScript library gives you a new way to craft web applications The htmx approach differs significantly from that of the currently popular single page application SPA frameworks rather than write a bunch of JavaScript you simply annotate HTML elements before you send them to the browser The resulting code is easier to understand and modify and because it downloads less to the browser and doesn t need JSON creation and parsing you ll find it performs better too Rethink web application design write code in any language that simply responds to requests with htmx snippets Dynamically update portions of the current web page directly from the server Implement common patterns such as

lazy loading input validation CSS transitions active search optimistic updates pagination infinite scroll polling and click to edit Add interactivity with JavaScript and libraries such as Alpine and _hyperscript Use the htmx JavaScript API to simplify DOM operations Make your web apps more secure escape user supplied content use Subresource Integrity hashes and enforce a Content Security Policy Go beyond the basic HTTP request response pattern with WebSockets and server sent events Discover a simpler way to implement web applications that emphasizes web fundamentals What You Need A modern web browser and the ability to build and run a local HTTP server using the server side language and framework of your choice The code examples are fully compatible with htmx 2 0   <u>Client/Server Programming with Java and CORBA</u> Robert Orfali,Dan Harkey,1997-02-13 Software Programming Languages   *Java WebSocket Programming* Danny Coward,2013-10-07 Master Application Development with Java WebSocket Build dynamic enterprise Web applications that fully leverage state of the art communication technologies Written by the leading expert on Java WebSocket programming this Oracle Press guide offers practical development strategies and detailed example applications Java WebSocket Programming explains how to design client server applications incorporate full duplex messaging establish connections create endpoints handle path mapping and secure data You ll also learn how to encrypt Web transmissions and enrich legacy applications with Java WebSocket Develop Web applications using the Java WebSocket API Create and publish annotated and programmatic endpoints Manage the lifecycle events of WebSocket endpoints Maintain reliable connections across the endpoint lifecycle Manage synchronous and asynchronous messaging Define encoding and decoding strategies for complex messaging Configure message timeouts size limits and exceptions Map message paths and route incoming URIs to Web containers Secure data authenticate users and encrypt connections   **Java EE and HTML5 Enterprise Application Development** John Brock,Arun Gupta,Geertjan Wielenga,2014-03-28 Create Next Generation Enterprise Applications Build and distribute business web applications that target both desktop and mobile devices Cowritten by Java EE and NetBeans IDE experts Java EE and HTML5 Enterprise Application Development fully explains cutting edge highly responsive design tools and strategies Find out how to navigate NetBeans IDE construct HTML5 programs employ JavaScript APIs integrate CSS and WebSockets and handle security This Oracle Press guide also offers practical coverage of SaaS MVVM and RESTful concepts Explore HTML5 and Java EE 7 features Use NetBeans IDE editors templates and code generators Implement MVVM functionality with Knockout js Dynamically map database objects using Java Persistence API Configure manage and invoke RESTful Web Services Maximize messaging efficiency through WebSockets Accept and process HTML5 Server Sent Events streams Employ Syntactically Awesome Stylesheets CSS3 and Sassy CSS   **CLIENT/SERVER PROGRAMMING WITH JAVA AND CORBA, 2ND ED (With CD)** Robert Orfali & Dan Harkey,2007-05 Market_Desc Programmers Developers Students in Graduate level Object or Java Courses Special Features Authors Proven track record on this topic they established themselves as the leaders in this area A lot of new technology about Java and CORBA is hitting at the end of
