

3.4 Cycles of Matter

Lesson Objectives

Describe how matter cycles among the living and nonliving parts of an ecosystem.

Describe how water cycles through the biosphere.

Explain why nutrients are important in living systems.

Describe how the availability of nutrients affects the productivity of ecosystems.

Lesson Summary

Recycling in the Biosphere Matter, unlike energy, is recycled within and between ecosystems. Elements pass from one organism to another and from one part of the biosphere to another through **biogeochemical cycles**, which are closed loops powered by the flow of energy.

The Water Cycle Water moves between the ocean, the atmosphere, and land.

Evaporation is the process in which water changes from a liquid to a gas.

Transpiration is the process in which water evaporates from the leaves of plants.

Nutrient Cycles The chemical substances that an organism needs to survive are called **nutrients**. Like water, nutrients pass through organisms and the environment.

Carbon Cycle: Carbon is a key ingredient of all organic compounds. Processes involved in the carbon cycle include photosynthesis and human activities such as burning.

Nitrogen Cycle: Nitrogen is needed by all organisms to build proteins. Processes involved in the nitrogen cycle include nitrogen fixation and denitrification.

- In **nitrogen fixation**, certain bacteria convert nitrogen gas into ammonia.
- In **denitrification**, other soil bacteria convert nitrogen compounds called nitrates back into nitrogen gas.
