

MARK SCHEME for the May/June 2013 series

0620/50

0620 CHEMISTRY

Paper 5 (Practical, maximum raw mark 40)

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, OCEI, Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Optimization of Trustworthy Biomolecular Quantitative Analysis Using Cyber-Physical Microfluidic Platforms Mohamed Ibrahim, Krishnendu Chakrabarty, 2020-05-31 A microfluidic biochip is an engineered fluidic device that controls the flow of analytes thereby enabling a variety of useful applications According to recent studies the fields that are best set to benefit from the microfluidics technology also known as lab on chip technology include forensic identification clinical chemistry point of care PoC diagnostics and drug discovery The growth in such fields has significantly amplified the impact of microfluidics technology whose market value is forecast to grow from 4 billion in 2017 to 13.2 billion by 2023 The rapid evolution of lab on chip technologies opens up opportunities for new biological or chemical science areas that can be directly facilitated by sensor based microfluidics control For example the digital microfluidics based ePlex system from GenMarkDx enables automated disease diagnosis and can bring syndromic testing near patients everywhere However as the applications of molecular biology grow the adoption of microfluidics in many applications has not grown at the same pace despite the concerted effort of microfluidic systems engineers Recent studies suggest that state of the art design techniques for microfluidics have two major drawbacks that need to be addressed appropriately 1 current lab on chip systems were only optimized as auxiliary components and are only suitable for sample limited analyses therefore their capabilities may not cope with the requirements of contemporary molecular biology applications 2 the integrity of these automated lab on chip systems and their biochemical operations are still an open question since no protection schemes were developed against adversarial contamination or result manipulation attacks Optimization of Trustworthy Biomolecular Quantitative Analysis Using Cyber Physical Microfluidic Platforms provides solutions to these challenges by introducing a new design flow based on the realistic modeling of contemporary molecular biology protocols It also presents a microfluidic security flow that provides a high level

of confidence in the integrity of such protocols In summary this book creates a new research field as it bridges the technical skills gap between microfluidic systems and molecular biology protocols but it is viewed from the perspective of an electronic systems engineer

Aerial Aftermaths Caren Kaplan,2017-12-21 From the first vistas provided by flight in balloons in the eighteenth century to the most recent sensing operations performed by military drones the history of aerial imagery has marked the transformation of how people perceived their world better understood their past and imagined their future In Aerial Aftermaths Caren Kaplan traces this cultural history showing how aerial views operate as a form of world making tied to the times and places of war Kaplan s investigation of the aerial arts of war painting photography and digital imaging range from England s surveys of Scotland following the defeat of the 1746 Jacobite rebellion and early twentieth century photographic mapping of Iraq to images taken in the immediate aftermath of 9 11 Throughout Kaplan foregrounds aerial imagery s importance to modern visual culture and its ability to enforce colonial power demonstrating both the destructive force and the potential for political connection that come with viewing from above

100% Clean, Renewable Energy and Storage for Everything Mark Z. Jacobson,2020-10-01 Numerous laws including the Green New Deal have been proposed or passed in cities states and countries to transition from fossil fuels to 100% clean renewable energy in order to address climate change air pollution and energy insecurity This textbook lays out the science technology economics policy and social aspects of such transitions It discusses the renewable electricity and heat generating technologies needed the electricity heat cold and hydrogen storage technologies required how to keep the electric power grid stable and how to address non energy sources of emissions It discusses the history of the 100% Movement which evolved from a collaboration among scientists cultural leaders business people and community leaders Finally it discusses current progress in transitioning to 100% renewables and the new policies needed to complete the transition Online course supplements include lecture slides answers to the end of chapter student exercises and a list of extra resources

Silicon Nanomaterials Sourcebook Klaus D. Sattler,2017-07-28 This comprehensive tutorial guide to silicon nanomaterials spans from fundamental properties growth mechanisms and processing of nanosilicon to electronic device energy conversion and storage biomedical and environmental applications It also presents core knowledge with basic mathematical equations tables and graphs in order to provide the reader with the tools necessary to understand the latest technology developments From low dimensional structures quantum dots and nanowires to hybrid materials arrays networks and biomedical applications this Sourcebook is a complete resource for anyone working with this materials Covers fundamental concepts properties methods and practical applications Focuses on one important type of silicon nanomaterial in every chapter Discusses formation properties and applications for each material Written in a tutorial style with basic equations and fundamentals included in an extended introduction Highlights materials that show exceptional properties as well as strong prospects for future applications Klaus D Sattler is professor physics at the University of Hawaii Honolulu having earned his PhD at the Swiss Federal Institute of

Technology ETH in Zurich He was honored with the Walter Schottky Prize from the German Physical Society and is the editor of the sister work also published by Taylor Francis Carbon Nanomaterials Sourcebook as well as the acclaimed multi volume Handbook of Nanophysics

Life-Cycle Greenhouse Gas Emissions of Commercial Buildings Cuong N. N. Tran,Vivian W. Y. Tam,Khoa N. Le,2021-07-12 This book develops a model to evaluate and assess life cycle greenhouse gas emissions based on typical Australian commercial building design options It also draws comparisons between some of the many green building rating tools that have been developed worldwide to support sustainable development These include Leadership in Energy and Environmental Design LEED by the United States Green Building Council USGBC Building Research Establishment Environmental Assessment Method BREEAM by the Building Research Establishment Comprehensive Assessment System for Building Environmental Efficiency CASBEE by the Japanese Sustainable Building Consortium and Green Star Environmental Rating System by the Green Building Council of Australia Life cycle assessment LCA life cycle energy consumption and life cycle greenhouse gas emissions form the three pillars of life cycle studies which have been used to evaluate environmental impacts of building construction Assessment of the life cycle greenhouse gas emissions of buildings is one of the significant obstacles in evaluating green building performance This book explains the methodology for achieving points for the categories associated with reduction of greenhouse gas emissions in the Australian Green Star rating system The model for the assessment uses GaBi 8 7 platform along with Visual Basic in Microsoft Excel and shows the relationship between the building s energy consumption and greenhouse gas emissions released during the lifetime of the building The data gathered in the book also illustrates that the green building design and specifications are becoming more popular and are being increasingly utilized in Australia This book is important reading for anyone interested in sustainable construction green design and buildings and LCA tools
