Ohio Standards Connection

Number, Number Sense and Operations

Benchmark H

Mathematical Processes

Benchmarks

- 11. Use representations to organize and communicate mathematical thinking and problem solutions.
- 1. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.

Lesson Summary:

In this lesson students represent division of fractions using manipulatives, such as freezer pops, candy bars, and models such as drawings squares. Students develop an algorithm from these examples and solve problems using fractions.

Estimated Duration: Three hours

Commentary:

The concept of division of fractions has been greatly misunderstood and inadequately addressed in traditional mathematics instruction. Developing an understanding of what happens when you divide by a fraction prior to development of the algorithm is essential in the thought process. This is accomplished by having the student visually see and understand what dividing by a fraction means with physical examples. Additionally the use of a hands-on approach with difficult or new concepts helps to bridge the prior knowledge with the new information. Likewise, the guiding of a student to the understanding instead of telling them what they should know leads to longer retention and understanding of the concept.

Pre-Assessment:

Assess students' informal thinking about dividing whole numbers by fractions.

- Present the following questions on the board or overhead projector to students.
 1. How many quarter-hours are in three hours?
 2. How many thirds of a cup are in two cups?
 3. How many half-meters are in five meters?
 4. How many eighths of a mile are in four miles?
- Have the students determine the number and draw a representation to show how they determined the number. Observe students and note different representations student use to determine the numbers.
- Select students to share their representations of the situations. Include a variety of representations students used.

Scoring Guidelines:

Assess prior knowledge of understanding the number of fractional parts that go into one whole then into whole numbers larger than one. Provide intervention for students who do not
