## Student Exploration: Chemical Changes

**Vocabulary:** acid, base, catalyst, chemical change, coefficient, conservation of matter, decomposition, dissolve, double replacement, endothermic, exothermic, indicator, ion, physical change, product, reactant, single replacement, subscript, synthesis

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

1. A student mixes baking soda and vinegar in a glass. The results are shown at left. Do you think any new substances are being created in this mixture? If so, how do you know?

When these two substances are combined they form two chemical reactions because one is a base and one is an acid. At the end of the reactions, the bubbles that are shown in the image are made of carbon dioxide gas.

2. Suppose this was done on top of a balance. Do you think the mass would change as the reaction proceeded?

I think the mass would remain the same as the reaction proceeds as long as the amounts are the same.

3. What do you think would happen to the mass if the reaction took place inside a sealed plastic bag?

The mass would be contained and compressed if the reaction was in a sealed plastic bag because it was limited room to react in.

### Gizmo Warm-up

A **chemical change**, (or chemical reaction) occurs when one or more substances, called **reactants**, are transformed into different substances, or **products**. In the *Chemical Changes* Gizmo, you will look for evidence of chemical changes by looking at changes you can see, touch, or smell.

To begin, check that **Reactant 1** is **Sodium** and **Reactant 2** is **Water**. Sodium is a metal so soft you can cut it with a knife.
