Handbook on Artificial Intelligence and Expert Systems in Law Enforcement Edward C. Ratledge, Joan E. Jacoby, 1989-09-26 As the complexities and problems that plague law enforcement agencies continue to proliferate the need to utilize every available tool has led to the application of expert systems to law enforcement activities This first book to explore this application is both practical and conceptually clear as it explains the potential utility of expert systems and their impact on operations and management Such systems can support command and control through computer aided dispatching assist in the solution of high volume crimes such as residential burglaries aid in the design of programs for the apprehension and prosecution of career criminals and repeat offenders upgrade personnel through enhanced training programs and provide an improved method for the delivery of technical assistance and training services Until now literature to assist organizations that could benefit from this technology has been scarce Ratledge and Jacoby have geared their discussions to a wide audience which includes both practitioners and the academic community This handbook offers clear systematic explanations of the applications of expert systems in the world of law enforcement It discusses the impact of these systems on traditional ways of policing and crime solving and details a set of practical guidelines for jurisdictions considering the use of expert systems The text is designed to present information in an order that progresses from general to technical aspects of the subject The first two chapters provide an overview of expert systems as they apply to different law enforcement areas and discuss the policy issues they create The next section describes practical applications of expert systems in computer aided dispatching crime solving and training Chapter 4 explains the basic steps in building expert systems its terminology and general characteristics Chapter 5 offers an introduction to artificial intelligence and its uses in problem solving and expert systems Written with the expert systems designer or data processing manager in mind Chapter 6 reviews the problems encountered in linking inferencing to data processing and the efficiencies and technical requirements of the system In Chapter 7 a case study of the Baltimore County Police Department's expert system for residential burglaries is presented and the steps taken in the development of that system are described Included in the valuable appendices are a list of vendors two bibliographies including an annotated one relating to current policing issues and one dealing with technical publications and a glossary This timely handbook will enable practitioners in criminal justice to make informed decisions regarding the implementation of expert systems It also provides up to the minute information for computer system consultants and academicians and students in computer science and criminal justice administration

The Executive's How-To Guide to

Automation George E. Danner, 2018-12-17 From driverless cars to pilotless planes many functions that have previously required human labor can now be performed using artificial intelligence For businesses this use of AI results in reduced labor costs and even more important creating a competitive advantage How does one look at any organization and begin the work of automating it in sensible ways This book provides the blueprint for automating critical business functions of all kinds It outlines the skills and technologies that must be brought to bear on replicating human like thinking and judgment in the form of algorithms Many believe that algorithm design is the exclusive purview of computer scientists and experienced programmers This book aims to dispel that notion An algorithm is merely a set of rules and anyone with the ability to envision how different components of a business can interact with other components already has the ability to work in algorithms Though many fear that the use of automation in business means human labor will no longer be needed the author argues that organizations will re purpose humans into different roles under the banner of automation not simply get rid of them He also identifies parts of business that are best targeted for automation This book will arm business people with the tools needed to automate companies making them perform better move faster operate cheaper and provide great lasting value to investors
