Ghamsari,Soumen Dhara,2020-03-11 The book Nanorods and Nanocomposites aims to provide the reader with an overview of the recent advances made on the synthesis of nanorods and nanocomposites and their emerging applications for a better lifestyle The nanorods are a surprising gift to materials science from the research field of nanoscale materials Nanorods promise to serve as a building block of the next generation electronic and optoelectronic devices Nanocomposite materials are multiphase solid materials that have one organic or inorganic nanoarchitected compound with various nanostructures such as nanoparticles nanowires nanorods and nano films etc or with multiphase solid materials metals oxides polymers and carbon Due to the progressive physical chemical electrical thermal optical electrochemical and catalytic properties of

nanocomposites they exhibit multi functional characteristics in a variety of engineering applications such as piezoelectrics thermoresistors sensors energy related technologies water purification catalysts electro photonics and so on Despite the wide variety of applications due to their unique nanostructures the fabrication of nanocomposites and the realization of their applications in different fields remains a challenging task The focus of this book is to provide a platform for presentation of the latest knowledge and recent progress in synthesis functionalization and applications of nanocomposite materials It is expected that this book presents the most attractive and versatile technological developments in the field of nanorods and nanocomposite materials and their applications that will provide a better understanding of the currently ongoing research in related fields

**The Afar Volcanic Province Within the East African Rift System** G. Yirgu,Cindy J. Ebinger,P. K. H. Maguire,2006

The seismically and volcanically active East African Rift System is an ideal laboratory for continental break up processes it encompasses all stages of rift development Its northernmost sectors within the Afar volcanic province include failed rifts nascent sea floor spreading and youthful passive continental margins associated with one or more mantle plumes A number of models have been proposed to explain the success and failure of continental rift zones but there remains no consensus on how strain localizes to achieve rupture of initially 125 250 km thick plates or on the interaction between the plates and asthenospheric processes This collection of papers provides new structural stratigraphic geochemical and geophysical data and numerical models needed to resolve fundamental questions concerning continental break up and mantle plume processes The focus is on how mantle melt intrudes and is distributed through the plate and how this magma intrusion process controls along axis segmentation and facilitates break up
