# Dayton® Gearmotors CE

### Description

Dayton gearmotors are parallel shaft FENV units used for applications requiring continuous duty and high output torque. Housings are constructed of high strength die cast alloy material. Gearhousing and cover are doweled and precision machined with rabbeted joints to provide accurate gear alignment.

Gearing consists of wide faced helical high-speed input stage for smooth, quiet operation. Gears and pinions are heat treated for maximum durability under rated torque. Oil impregnated bronze bearings support alloy steel gear pins. Output shaft is supported by an antifriction high strength needle bearing for high overhung load capacities.

Motors are equipped with shielded ball bearings.
