Chapter 1 Planet Earth

- 1** The carbon cycle is part of the natural exchange and recycling of materials in the environment. It relies on energy to bring about the changes involved. In the case of the carbon cycle this energy comes from chemical changes one of which is photosynthesis – a photochemical reaction dependent on sunlight.

Discussion could include reference to the major sources of energy that maintain the temperature of the planet, i.e. energy from the Sun and from radioactive decay in the Earth.
