

Chapter 5 Assessment

pages 166–169

Section 5.1

Mastering Concepts

34. Define the following terms.

a. frequency

Frequency is the number of waves that pass a given point per second.

b. wavelength

Wavelength is the shortest distance between equivalent points on a continuous wave.

c. quantum

A quantum is the minimum amount of energy that can be lost or gained by an atom.

d. ground state

An atom's ground state is its lowest allowable energy state.

35. Arrange the following types of electromagnetic radiation in order of increasing wavelength.

a. ultraviolet light

b. microwaves

c. radio waves

d. X rays

d. X rays, a. ultraviolet light, b. microwaves, c. radio waves

36. A gamma ray has a frequency of 2.88×10^{21} Hz. What does that mean?

2.88×10^{21} gamma-ray electromagnetic waves of this frequency pass a given point per second.

37. What is the photoelectric effect?

a phenomenon in which a metal emits electrons when light of a sufficient frequency shines on it

38. **Neon Sign** How does light emitted from a neon sign differ from sunlight?

The light from a neon sign contains only certain visible colors, while sunlight contains the full spectrum of colors.

39. Explain Planck's quantum concept as it relates to energy lost or gained by matter.

According to Planck, for a given frequency, ν , matter can emit or absorb energy only in discrete quanta that are whole-number multiples of $h\nu$, where h is Planck's constant.

40. How did Einstein explain the photoelectric effect?

He proposed that photons must have a certain minimum energy level, or threshold, value to cause the ejection of a photoelectron.

41. **Rainbow** What are two differences between the red and green electromagnetic waves in a rainbow?

The red waves have a longer wavelength and a lower frequency.

42. **Temperature** What happens to the light emitted by a heated, glowing object as its temperature increases?

The color of the light changes as the object acquires more and more energy.

43. What are three deficiencies of the wave model of light related to light's interaction with matter?

The wave model does not explain the photoelectric effect, atomic emission spectra, and why matter emits different frequencies of light at different temperatures.

44. How are radio waves and ultraviolet waves similar? How are they different?

Both types of waves travel at the same speed in a vacuum, 3.00×10^8 m/s. Radio waves have a longer wavelength and lower frequency than ultraviolet waves.

practices middle school science can capture the interest and energy of adolescent students and expand their understanding
of the world around them Resources for Teaching Middle School Science developed by the National Science Resources
Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that will engage students
in grades 6 through 8 The volume describes more than 400 curriculum titles that are aligned with the National Science
Education Standards This completely new guide follows on the success of Resources for Teaching Elementary School Science
the first in the NSRC series of annotated guides to hands on inquiry centered curriculum materials and other resources for
science teachers The curriculum materials in the new guide are grouped in five chapters by scientific area Physical Science
Life Science Environmental Science Earth and Space Science and Multidisciplinary and Applied Science They are also
grouped by type core materials supplementary units and science activity books Each annotation of curriculum material
includes a recommended grade level a description of the activities involved and of what students can be expected to learn a
list of accompanying materials a reading level and ordering information The curriculum materials included in this book were
selected by panels of teachers and scientists using evaluation criteria developed for the guide The criteria reflect and
incorporate goals and principles of the National Science Education Standards The annotations designate the specific content
standards on which these curriculum pieces focus In addition to the curriculum chapters the guide contains six chapters of
diverse resources that are directly relevant to middle school science Among these is a chapter on educational software and
multimedia programs chapters on books about science and teaching directories and guides to science trade books and
periodicals for teachers and students Another section features institutional resources One chapter lists about 600 science
centers museums and zoos where teachers can take middle school students for interactive science experiences Another
chapter describes nearly 140 professional associations and U S government agencies that offer resources and assistance

Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher trainers science curriculum specialists advocates of hands on science teaching and concerned parents
