production Mass introduced after 1945 antibiotics helped revolutionize post war agriculture Food producers used antibiotics  
to prevent and treat disease protect plants preserve food and promote animals growth Many soon became dependent on  
routine antibiotic use to sustain and increase production The resulting growth of antibiotic infrastructures came at a price  
Critics blamed antibiotics for leaving dangerous residues in food enabling bad animal welfare and selecting for antimicrobial  
resistance AMR in bacteria which could no longer be treated with antibiotics Pyrrhic Progress reconstructs the complicated  
negotiations that accompanied this process of risk prioritization between consumers farmers and regulators on both sides of  
the Atlantic Unsurprisingly solutions differed while Europeans implemented precautionary antibiotic restrictions to curb  
AMR consumer concerns and cost benefit assessments made US regulators focus on curbing drug residues in food The result  
was a growing divergence of antibiotic stewardship and a rise of AMR Kirchhelle s comprehensive analysis of evolving non  
human antibiotic use and the historical complexities of antibiotic stewardship provides important insights for current debates
