(PEEC) System Overview

The 3412 PEEC Industrial Engine is an electronically-controlled 3412. PEEC controls fuel rate electronically. The electronics replace the mechanical fuel-air ratio control, torque control group, and various adjustment screws.

PEEC uses several sensors as inputs to control the rack function. PEEC decides where it wants to position the rack. It then varies the voltage to the solenoid (or "BTM") to move the rack toward the desired position. Position sensors tell PEEC when the rack is at the desired position.
